

AP Biology Lab 05 – Cellular Respiration Video Review Sheet

www.bozemanscience.com/ap-bio-lab-5-cellular-respiration

1. What organelle do you need to do cellular respiration?
 - The need to do cellular respiration is Mitochondria.
2. What are the three steps of respiration?
 - Three steps of respiration is Glycolysis, Krebs cycle, and Electron transport chain
3. What is this lab measuring?how do they measure it?
 - Measure the rate of cellular respiration. We do measuring the rate at which oxygen is being consumed.
4. What do you use to measure it?
 - Oxygen

Sketch it to the right and indicate what substances are where.

5. Why does he use KOH (potassium hydroxide)?
 - KOH is used to solidify CO₂ produced by a respiring organism.
6. What are the three different vials/jars and what is the purpose of tube with glass beads?
 - The three different vials/jars are the peas, dry peas and glass beads. Glass beads used to subtract our values to account for fluctuations in the temperature and how that effects it.
7. Peas will start to consume oxygen and produce carbon dioxide. But the carbon dioxide will bind with the KOH and precipitate out as a solid. Therefore the volume of gas in the vial decreases as oxygen is consumed. As the volume drops, water moves where? **The water pressure is going to start to move this bubble further.**
8. Temperature fluctuations will have a huge influence on this because it effects gas volume, this is why you have a flask of **germinating peas, dry peas and worms**
9. How do you calculate the "rate" of respiration?
 - We use person's data
