**Agrindex** ,1995      **ACOSO E DEMOLICIÓN DO SISTEMA PÚBLICO DE ENSINO. COVID-19: CAUSA OU ESCUSA?** Xosé Ramón Branco Buxán,2021-12-15 O ensaio identifica no sistema educativo unha serie de subxectividades e de arquitecturas organizativas que forman parte da cultura neoliberal hexem nica en Occidente Os procesos de privatizaci n e individualizaci n que se fundamentan na estigmatizaci n

segregación e degradación do ensino público representan un perigo e un desafío para o cumprimento dos obxectivos ideais de ben público de balde e de acceso universal. As mudanzas das formas estruturais tradicionais cara outras en rede de subcontratas ou de tipo trevo camian cara formas privatizadoras en todos os seus niveis ao mesmo tempo que modelan de xeito diferenciado unha serie de novas subxectividades. A presenza da Covid 19 acelerou os procesos privatizadores desencadeados polo plan Bolonia mediante a implantación intensiva das TIC que envoltas polo mito da neutralidade representan para Boaventura de Sousa Santos novos desafíos como por exemplo a digitalización do coecemento do ensino e da aprendizaxe. Na actualidade ningunha cuestiona conceptos como ciclo económico ou a importancia do empresario e do emprendedor de xeito que a innovación converteuse nun dos piares da industria das TIC e da sociedade en xeral. O alcance dos efectos desta política neoliberal sobre o sistema público de ensino depende da racionalización e da interiorización dunha submisión previamente aprendida na sociedade e nas propias estruturas escolares cara un poder que interpela a natureza dos individuos para xustificar as implantacións.

Some also are predators of crop pests and have been used successfully in biological control. Certain omnivorous plant bugs have been considered both harmful pests and beneficial natural enemies of pests on the same crop depending on environmental conditions or the perspective of an observer. As high yielding varieties that lack pest resistance are planted mirids are likely to become even more important crop pests. They also threaten crops as insecticide resistance in the family increases and as the spread of transgenic crops alters their populations. Predatory mirids are increasingly used as biocontrol agents especially of greenhouse pests such as thrips and whiteflies. Mirids provide abundant opportunities for research on food webs intraguild predation and competition. Recent worldwide activity in mirid systematics and biology testifies to increasing interest in plant bugs. The first thorough review and synthesis of biological studies of mirids in more than 60 years. *Biology of the Plant Bugs* will serve as the basic reference for anyone studying these insects as pests beneficial IPM predators or as models for ecological research    **Entomology** University of California, 1971
