## 2012 Eha Paper 1 Marks:

**Living within a Fair Share Ecological Footprint** Robert Vale, Brenda Vale, 2013-09-02 According to many authorities the impact of humanity on the earth is already overshooting the earth's capacity to supply humanity's needs. This is an unsustainable position. This book does not focus on the problem but on the solution by showing what it is like to live within a fair earth share ecological footprint. The authors describe numerical methods used to calculate this, concentrating on low or no cost behaviour change rather than on potentially expensive technological innovation. They show what people need to do now in regions where their current lifestyle means they are living beyond their ecological means, such as in Europe, North America and Australasia. The calculations focus on outcomes rather than on detailed discussion of the methods used. The main objective is to show that living with a reduced ecological footprint is both possible and not so very different from the way most people currently live in the west. The book clearly demonstrates that change in behaviour now will avoid some very challenging problems in the future. The emphasis is on workable, practical and sustainable solutions based on quantified research rather than on generalities about overall problems facing humanity. *Manufacturing Science and Technology, ICMST2011*

**Chronic Myelogenous Leukemia** Masahiro Kizaki, 2015-11-05 Molecular Pathogenesis and Treatment of Chronic Myelogenous Leukemia provides a comprehensive understanding of the recent molecular genetics of Chronic Myelogenous Leukemia (CML) and a characterization of the molecular targets for drug development. Included are therapeutic implications, diagnosis and prognosis for understanding and facilitating daily practice in the management of patients with CML.

Understanding of the pathogenesis and therapy of hematological malignancies such as CML has grown significantly in recent years. This development owes much to the progress in molecular biology and now makes a major contribution to diagnosis and to treatment that pharmacologically targets the molecular events of CML. Molecular targeting therapy with newly developed agents such as small molecules and antibodies for hematological malignancies are being discovered after years of research. Some of these including tyrosine kinase inhibitors such as imatinib, nilotinib and dasatinib lead to increased survival rates and improved therapies. With the opinion leaders of basic and clinical research in the field as authors, this book reviews recent advances in the biology of CML. *Paper, 1955 Proceedings of the EAA Joint Symposium on Auralization and Ambisonics 2014*

Weinzierl, Stefan, Vorländer, Michael, Zotter, Franz, Maempel, Hans-Joachim, Lindau, Alexander, 2014 In consideration of the remarkable intensity of research in the field of Virtual Acoustics including different areas such as sound field analysis and synthesis, spatial audio technologies and room acoustical modeling and auralization, it seemed about time to organize a second international symposium following the model of the first EAA Auralization Symposium initiated in 2009 by the acoustics group of the former Helsinki University of Technology, now Aalto University. Additionally, research communities

which are focused on different approaches to sound field synthesis such as Ambisonics or Wave Field Synthesis have in the meantime moved closer together by using increasingly consistent theoretical frameworks Finally the quality of virtual acoustic environments is often considered as a result of all processing stages mentioned above increasing the need for discussions on consistent strategies for evaluation Thus it seemed appropriate to integrate two of the most relevant communities i e to combine the 2nd International Auralization Symposium with the 5th International Symposium on Ambisonics and Spherical Acoustics The Symposia on Ambisonics initiated in 2009 by the Institute of Electronic Music and Acoustics of the University of Music and Performing Arts in Graz were traditionally dedicated to problems of spherical sound field analysis and re synthesis strategies for the exchange of ambisonics encoded audio material and more than other conferences in this area the artistic application of spatial audio systems This publication contains the official conference proceedings It includes 29 manuscripts which have passed a 3 stage peer review with a board of about 70 international reviewers involved in the process Each contribution has already been published individually with a unique DOI on the DepositOnce digital repository of TU Berlin Some conference contributions have been recommended for resubmission to Acta Acustica united with Acustica to possibly appear in a Special Issue on Virtual Acoustics in late 2014 These are not published in this collection
