

## Charles Darwin

Charles Darwin, at the age of 11, went to sea on a five-year journey around the world. Images on the left.

Developed his theory by examining the inheritance and transmission of acquired characteristics of parents, including birds and shells.

In 1859, Darwin published his groundbreaking work, 'On the Origin of Species', which explained evolution and the diversity of life and human development and understanding of the natural world.

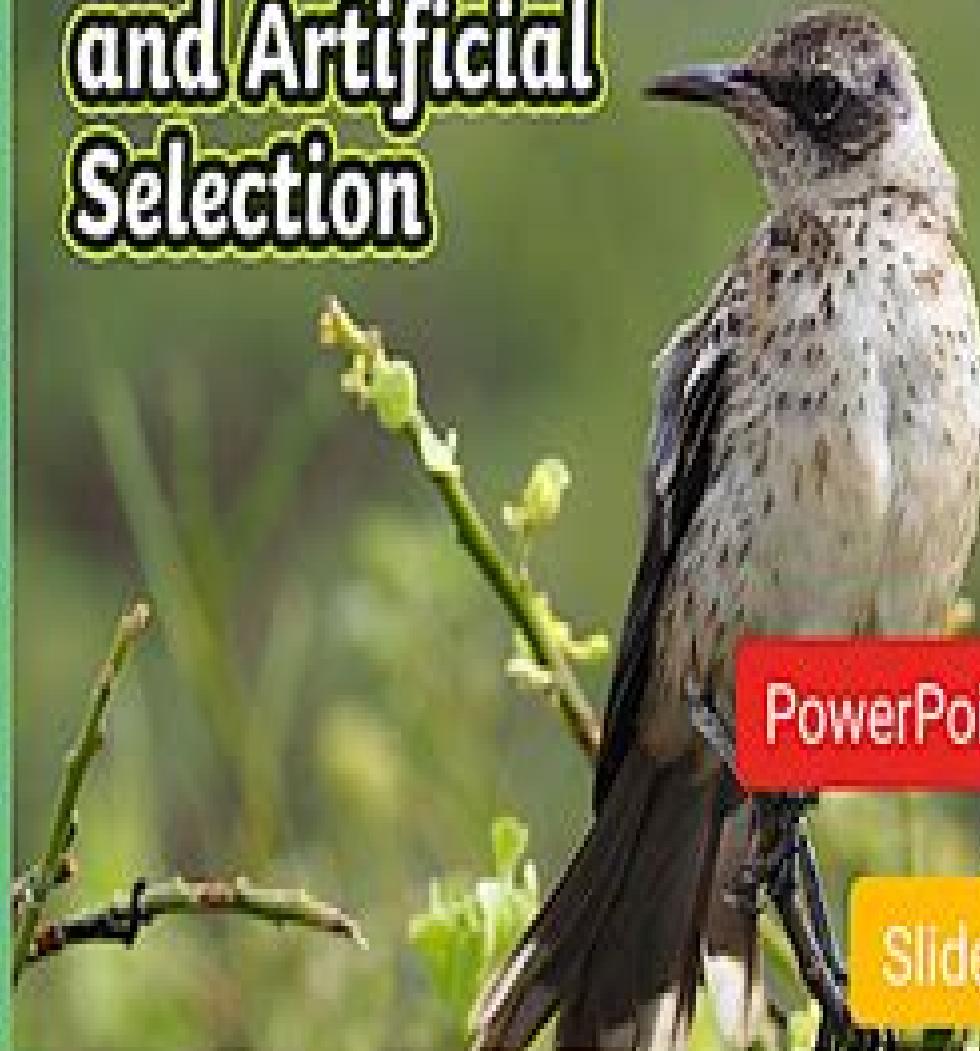

## Think About It

What are the problems of evolution? Many people are against evolution because they believe it contradicts their religious beliefs. What beliefs might contradict the theory?

The world is still changing, which can trigger the ability of some species to survive based on their characteristics and abilities.

(Changes could include climate, new predators introduced by a human and human activity).
