**Hybrid Solutions for the Modelling of Complex Environmental Systems** Christian E. Vincenot, Stefano Mazzoleni, Lael Parrott, 2017-01-11. Systems studied in environmental science due to their structure and the heterogeneity of the entities composing them often exhibit complex dynamics that can only be captured by hybrid modeling approaches. While several concurrent definitions of hybrid modeling can be found in the literature, it is defined here broadly as the approach consisting in coupling existing modeling paradigms to achieve a more accurate or efficient representation of systems. The need for hybrid models generally arises from the necessity to overcome the limitation of a single modeling technique in terms of structural flexibility, capabilities or computational efficiency. This book brings together experts in the field of hybrid modeling to demonstrate how this approach can address the challenge of representing the complexity of natural systems.
