### Respiratory System

Inhale deep, feel the air,  
Nostrils open, breathing fair.  
Through the trachea, down it goes,  
Into the lungs where fresh air flows.

Tiny alveoli, little sacs,  
Exchange of gases, quick and snacks.  
Oxygen in, carbon out,  
Healthy breaths keep us about!

So thank your lungs, every day,  
For helping you run, jump, and play!

Koeroghlian, 2021 A dynamic model of human respiratory mechanics is developed to aid in the design and development of pressure compensated oxygen masks worn by combat aircrew Breathing models of varying complexity are formulated using the bond graph method to convey key elements of the system A simple respiratory mask model containing inhalation and exhalation check valves is combined with the

respiratory mechanics model The system state equations are derived for each of the models presented and constitutive relations are described Numerical solution of the system state equations is shown to capture dissipative and energy storage effects in respiratory tract and compliant elements of the system The inclusion of air flow inertance in the model is shown to simplify the state equations by eliminating a non linear algebraic loop Respiratory mask performance metrics are presented and results from several case studies with variations in the lung characteristics and breathing scenarios are presented to demonstrate the effectiveness of the model in predicting key physiological measures reported in the form of flow volume loops work of breathing and mask cavity pressures
