**Audi A6** Bentley Publishers, 2003 Bentley Publishers is the exclusive factory authorized publisher of Audi Repair Manuals in the United States and Canada. The format has been designed for professional technicians so that finding applicable specifications is quick and easy and so that repair procedures can be grasped after a minimum of reading. All manuals are heavily illustrated with high quality photographs and drawings and cover aspects of maintenance and service work. Every manual is with factory specifications and tolerances. The Audi A6 Electrical Wiring Manual 1998-2000 covers Audi A6 models built on the C5 platform through model year 2000. This manual has been prepared using factory wiring diagrams, electrical component location information and scan tool diagnostics. Whether you're a professional service technician or a do-it-yourself Audi owner, this manual will be indispensable as a source of the same detailed electrical system information available at an authorized Audi dealer. Unfortunately, Audi factory wiring diagrams are no longer available on paper. Even an Audi owner who has no intention of working on his or her car will find that reviewing and owning this manual will make it possible to discuss repairs more intelligently with a professional service technician.

The scope and purpose of the SAE Recommended Practice is to provide standards for the control and indication of parking brakes in hydraulic braked vehicles over 4540 kg (10 000 lb) GVWR. This recommended practice pertains to automatic transmission applications and supplements the SAE J915 recommended practice. This recommended practice does not address parking brake system performance. Parking brake system performance, both static and dynamic conditions, is the responsibility of the OEM vehicle manufacturer or manufacturers that modify the vehicle by adding special vocational required equipment such as, but not limited to, outriggers, cranes, etc. There are several parking brake indication and control philosophies for hydraulic braked vehicles with a GVWR greater than 4540 kg (10 000 lb). For future vehicle and parking brake system designs, this recommended practice is intended to be a guide for consideration. The implementation of this new recommended practice will reduce operator confusion and promote standardization in all hydraulic braked vehicles. This recommended practice is intended to supplement the SAE J915 Automatic Transmissions Manual Control Sequence recommended practice as it relates to the various parking brake indication options. Major vehicle manufacturers were surveyed and current practices were identified to assist in the development of this document. Where necessary or possible, all current practices were included in this document to allow for

alternative methods to provide the specific functions The task force recognized that both the P and PB indication options existed in current vehicle applications The team evaluated the benefits and risks of both approaches and the following is a summary of the results In conclusion it was decided to recommend the PB indication as the standard method PB gives indication to the driver that the parking mechanism is a friction based product that wears and can yield over time is different from a park pawl in that it can sometimes be released independently by other manual means may not be acceptable in Canada French language and ISO complications P minimizes confusion for driver why should he or she care how vehicle is held in park as long as it is Besides the indication recommendations a transmission parking pawl and a mechanical friction parking brake should not be actuated with the same or single actuation device or method Besides the operator not knowing which parking brake function is actually holding the vehicle there can be binding and brake release sequence issues with having a single parking actuation function Automotive Brake System Chek-Chart,1997-01 Hydraulic Service Brake and Parking Brake Systems-passenger Cars; Comments of General Motors Corporation on Proposed Motor Vehicle Safety Standard ,1966
