Handbook On Smart Battery Cell Manufacturing: The Power Of Digitalization Kai Peter Birke, Max Weeber, Michael Oberle, 2022-06-09 The transformation towards electric mobility requires the highest quality mass production of battery cells. However, few research in battery cell engineering focus beyond new cell chemistries. As a consequence, there exists a huge gap between basic battery research and comparable scientific approaches to battery cell production. This handbook bridges the gap between basic electrochemical battery cell research and battery cell production approaches. To run lithium ion battery gigafactories successfully and sustainably, high quality battery cell production processes and systems are required. The Handbook on Smart Battery Cell Manufacturing provides a comprehensive and well-structured analysis of every aspect of the manufacturing process of smart battery cell, including upscaling battery cell production accompanied by many instructive practical examples of the digitalization of battery products and manufacturing systems using an integrated life cycle perspective.

The Robomobility Revolution of Urban Public Transport Sylvie Mira-Bonnardel, Fabio Antonialli, Danielle Attias, 2021-08-31 Over the past two decades, society has been witnessing how technological, political, and societal changes have been transforming individual and collective urban mobility. Driven both by newcomers and traditional players by disruptive as well as incremental innovations, the main objective now is to enhance mobility and accessibility while reducing vehicle ownership, congestion, road accidents, and pollution in cities. This transformation has been mainly enabled by the widespread adoption of internet-connected devices, e.g., smartphones and tablets, and by the innovative business models, technologies, and use cases that arose from this rapid digitalization, such as peer-to-peer and two-sided markets providing several mobility schemes: car sharing, car pooling, bike sharing, free-floating cars, bikes, electric scooter, ridesharing, and ride hailing, either for long distances as well as for urban and micro-mobility. The book presents in a holistic perspective how this revolution is happening and what are the major cornerstones for the implementation of robomobility. It aims at answering several substantial issues, such as: What is robomobility and what does it imply for the different stakeholders of the public transport ecosystem? How do policy makers integrate this innovation and how ready are the regulations? How do citizens take

part in this transformation What is the level of user acceptance for this new type of mobility What are its environmental impacts What is the economic impact of deploying these shuttles in a local ecosystem
