August 16 2014 Weather Prediction:

The Future of Drone Use Bart Custers, 2016-10-15 Given the popularity of drones and the fact that they are easy and cheap to buy it is generally expected that the ubiquity of drones will significantly increase within the next few years This raises questions as to what is technologically feasible now and in the future what is acceptable from an ethical point of view and what is allowed from a legal point of view Drone technology is to some extent already available and to some extent still in development The aim and scope of this book is to map the opportunities and threats associated with the use of drones and to discuss the ethical and legal issues of the use of drones This book provides an overview of current drone technologies and applications and of what to expect in the next few years The question of how to regulate the use of drones in the future is addressed by considering conditions and contents of future drone legislation and by analyzing issues surrounding privacy and safeguards that can be taken As such this book is valuable to scholars in several disciplines such as law ethics sociology politics and public administration as well as to practitioners and others who may be confronted with the use of drones in their work such as professionals working in the military law enforcement disaster management and infrastructure management Individuals and businesses with a specific interest in drone use may also find in the nineteen contributions contained in this volume unexpected perspectives on this new field of research and innovation Bart Custers is Associate Professor and Head of Research at eLaw the Center for Law and Digital Technologies at Leiden University The Netherlands He has presented his work at international conferences in the United States China Japan the Middle East and throughout Europe and has published over 80 scientific professional and popularizing publications including three books
