Tropical Forest Ecosystem Responses to Increasing Nutrient Availability Jürgen Homeier, Selene Báez, Dietrich Hertel, Christoph Leuschner, 2017-09-08 Deforestation and land use change have led to a strong reduction of tropical forest cover during the last decades. Climate change will amplify the pressure to the remaining refuges in the next years. In addition, tropical regions are facing increasing atmospheric inputs of nutrients which will have unknown consequences for the structure and functioning of these systems no matter if they are within protected areas or not. Even remote areas are expected to receive rising amounts of nutrients. The effects of higher rates of atmospheric nutrient deposition on the biological diversity and ecosystem functioning of tropical ecosystems are poorly understood and our knowledge of nutrient fluxes and nutrient limitation in tropical forest ecosystems is still limited. Yet it will be of paramount importance to know the effects of increased nutrient availability to conserve these ecosystems with their biological and functional diversity. During the last years, research efforts have more and more focused on the understanding of the role of nutrients in tropical ecosystems and several coordinated projects have been established that study the effects of experimental nutrient addition. This Research Topic combines results from experiments and from observational studies with the aim to review and conclude on our current knowledge on the role of additional nutrients in ecosystems. *Education for Democracy* Chad Alan Goldberg, 2020-11-17 American public universities were founded in a civic tradition that differentiated them from their European predecessors steering away from the pursuit of knowledge for its own sake. Like many such higher education institutions across the United States, the University of Wisconsin's mission, known as the Wisconsin Idea, emphasizes a responsibility to serve the needs of the state and its people. This commitment, which necessarily requires a pledge to academic freedom, has recently been openly threatened by state and federal actors seeking to dismantle a democratic and expansive conception of public service. Using the Wisconsin Idea as a lens, *Education for Democracy* argues that public higher education institutions remain a bastion of collaborative problem solving. Examinations of partnerships between the state, university, and people of the state highlight many crucial and lasting contributions to issues of broad public concern such as conservation, LGBTQ rights, and poverty alleviation. The contributors restore the value of state universities and humanities education as a public good, contending that they deserve renewed and robust support. **American Journal of Pharmacy and the Sciences Supporting Public Health**, 1888 **Atlas of Material Worlds** Matthew Seibert, 2021-08-17 *Atlas of Material Worlds* is a highly designed narrative atlas illustrating the agency of nonliving materials with unique, ubiquitous, and often hidden influence on our daily lives. Employing new materialism as a jumping off point, it examines the increasingly blurry lines between the organic and inorganic, engaging the following questions: What roles do nonliving materials play? Might a closer examination of those roles reveal an undeniable agency we have long overlooked or disregarded? If so, does this material agency change our understanding of the social structures, ecologies, economies, cosmologies, technologies, and

landscapes that surround us And perhaps most importantly why does material agency matter This is the story of the world s driest nonpolar desert pink flamingos and cerulean blue lithium ponds industrial shipping logistics pudding like jiggling substrates and monuments of mud galactic bodies radioactive sheep and the yellowcake of uranium Put simply this book dares readers to see the world anew from material up Atlas of Material Worlds offers this new relationship to our host environment in a time of mounting crises accelerating climate change ballooning socioeconomic inequality and rising toxic nationalism uniquely telling materialist stories for practitioners and students in landscape architecture and other built environment disciplines
