

APES Free-Response Questions Guide

OVERVIEW

You have 90 minutes to write 4 essays of equal value (10 points each). This gives you a little over 22 minutes for each essay. Count on 20 minutes to read and write the essay and 2 minutes to edit what you have written. Make sure to read each question thoroughly and make sure you understand all of its parts. The rubric for each question is set up to contain more than 10 points (11-13), but you can only earn a maximum of 10 points on any one question. Start with the essay that you deem the easiest first. The four questions usually fall into three categories:

One will involve that Analysis of a Data Set (calculators not allowed!).

One will involve a Document-Based Question. You will read a document and answer question based on the information in that document as well as expand on it based on your general knowledge.

Two will involve a Synthesis and Evaluation Question. One of these will require you to set up an experiment to show a particular effect.

THINGS TO DO

1. Before answering any questions

- Read the question twice.
- Underline what the question is asking for; answer the question(s) asked and only those questions. Answer all parts of the question.
- Begin answering the question in the order it is written.

2. Outline the answer on the green booklet to avoid confusion and disorganization. Pay close attention to the verbs used in the directions, such as **describe**, **explain**, **compare**, **give evidence for**, **graph**, **calculate**, **design an experiment**, etc., and be sure to follow those directions. Thinking ahead helps to avoid scratch outs, asterisks, skipping around and rambling.

If the question says to **'discuss'** or **'describe'**

1. Define the topic
2. Describe or elaborate on the topic
3. State an example of that topic

If the question says to **'compare and contrast'**

1. Clearly state what the items have in common
2. Clearly state how items are different

If the question asks a **mathematical** problem

1. Show every single step of all work
2. Set up problems so that labels cancel out (dimensional analysis)
3. Write answers with labels

The Oxford Handbook of Comparative Evolutionary Psychology Jennifer Vonk, Todd K. Shackelford, 2012-02-13 This volume brings together leading experts in comparative and evolutionary psychology Top scholars summarize the histories and possible futures of their disciplines and the contribution of each to illuminating the evolutionary forces that give rise to unique abilities in distantly and closely related species

The Oxford Companion to Consciousness Tim Bayne, Axel Cleeremans, Patrick Wilken, 2009 Consciousness is undoubtedly one of the last remaining scientific mysteries and hence one of the greatest contemporary scientific challenges How does the brain's activity result in the rich phenomenology that characterizes our waking life Are animals conscious Why did consciousness evolve How does science proceed to answer such questions Can we define what consciousness is Can we measure it Can we use experimental results to further our understanding of disorders of consciousness such as those seen in schizophrenia delirium or altered states of consciousness These questions are at the heart of contemporary research in the domain Answering them requires a fundamentally interdisciplinary approach that engages not only philosophers but also neuroscientists and psychologists in a joint effort to develop novel approaches that reflect both the stunning recent advances in imaging methods as well as the continuing refinement of our concepts of consciousness In this light the Oxford Companion to Consciousness is the most complete authoritative survey of contemporary research on consciousness Five years in the making and including over 250 concise entries written by leaders in the field the volume covers both fundamental knowledge as well as more recent advances in this rapidly changing domain Structured as an easy to use dictionary and extensively cross referenced the Companion offers contributions from philosophy of mind to neuroscience from experimental psychology to clinical findings so reflecting the profoundly interdisciplinary nature of the domain Particular care has been taken to ensure that each of the entries is accessible to the general reader and that the overall volume represents a comprehensive snapshot of the contemporary study of consciousness The result is a unique compendium that will prove indispensable to anyone interested in consciousness from beginning students wishing to clarify a concept to professional consciousness researchers looking for the best characterization of a particular phenomenon

Social Intelligence Nathan Emery, Nicola Clayton, Christopher D. Frith, 2008 Why are humans so clever The Social intelligence hypothesis explores the idea that this cleverness has evolved through the increasing complexity of social groups Our ability to understand and control nature is a by product of our ability to understand the mental states of others and to use this knowledge to co operate or deceive These abilities have not emerged out of the blue They can be found in many social animals that co operate and compete with one another birds as well as mammals This book brings together contributions from an impressive list of authorities in the field appropriately concluding with a chapter by Nick Humphrey one of the pioneers in this field This volume examines social intelligence in many different animal species and explores its development evolution and the brain systems upon which it depends Better understanding

and further development of social intelligence is critical for the future of the human race and the world that we inhabit Our problems will not be solved by mere cleverness but by increased social co operation **Intersubjectivity: Recent advances in theory, research, and practice** Colwyn Trevarthen,Jonathan T.
