Automotive Systems and Software Engineering Yanja Dajsuren, Mark van den Brand, 2019-07-17 This book presents the state of the art challenges and future trends in automotive software engineering. The amount of automotive software has grown from just a few lines of code in the 1970s to millions of lines in today's cars. And this trend seems destined to continue in the years to come considering all the innovations in electric, hybrid, autonomous and connected cars. Yet there are also concerns related to onboard software such as security, robustness and trust. This book covers all essential aspects of the field. After a general introduction to the topic, it addresses automotive software development, automotive software reuse, E/E architectures and safety. C-ITS and security and future trends. The specific topics discussed include requirements engineering for embedded software systems, tools and methods used in the automotive industry, software product lines, architectural frameworks, various related ISO standards, functional safety and safety cases, cooperative intelligent transportation systems, autonomous vehicles and security and privacy issues. The intended audience includes researchers from academia who want to learn what the fundamental challenges are and how they are being tackled in the industry, and practitioners looking for cutting edge academic findings. Although the book is not written as lecture notes, it can also be used in advanced master's level courses on software and system engineering. [Medical Visualization and Applications of Technology – Volume 2](#) Jenny Clancy, Matthieu Poyade, 2024-08-21 This edited volume encompasses chapters on novel and innovative research in the applications of leading digital technologies in an accessible and engaging way. By utilising cutting edge and ever progressive technology in visualization, it will enhance our understanding and application in our everyday lives. This volume shows how we can use Extended Reality, 3D animations and serious games to benefit the learner, educator, clinician, patient, parent and carer. Visualization techniques like Virtual, Augmented and Mixed Reality are shown, and how they can be utilised to improve training and understanding of anatomy, surgery and clinical assessment. This is covered specifically for emergency practitioners in enhancing their understanding of ECGs for potential myocardial infarction by using augmented reality. From a translational medicine perspective and pre-operative pediatric surgical planning, the benefits of augmented reality are examined as to what might be found intra-operatively from imaging techniques. Educational applications of digital technologies using serious games and Extended Reality are examined. We show how Mixed Reality can aid understanding in cellular anatomy for our learners and researchers alike. We also show how serious games can have applications in diverse areas like parasite infections and neuroanatomy education and training. Finally, from a clinical perspective, the use of 3D animations and their applications is discussed for vertebral fractures and increasing parent carer awareness through interactive applications. Also, the use of 3D animations in cerebral magnetic resonance angiography for global education highlights the great benefits of these tools and technologies. There is something for the researcher, clinician, educator, patient and carer as we explore novel
