*Essential Readings in Problem-Based Learning* Andrew Walker, Heather Leary, Cindy Hmelo-Silver, 2015-01-15 Like most good educational interventions problem based learning PBL did not grow out of theory but out of a practical problem Medical students were bored dropping out and unable to apply what they had learned in lectures to their practical experiences a couple of years later Neurologist Howard S Barrows reversed the sequence presenting students with patient problems to solve in small groups and requiring them to seek relevant knowledge in an effort to solve those problems Out of his work PBL was born The application of PBL approaches has now spread far beyond medical education Today PBL is used at levels from elementary school to adult education in disciplines ranging across the humanities and sciences and in both academic and corporate settings This book aims to take stock of developments in the field and to bridge the gap between practice and the theoretical tradition originated by Barrows that underlies PBL techniques **Artificial Intelligence in Education.**

**Posters and Late Breaking Results, Workshops and Tutorials, Industry and Innovation Tracks, Practitioners, Doctoral Consortium and Blue Sky** Ning Wang, Genaro Rebolledo-Mendez, Vania Dimitrova, Noboru Matsuda, Olga C. Santos, 2023-06-29 This volume constitutes poster papers and late breaking results presented during the 24th International Conference on Artificial Intelligence in Education AIED 2023 Tokyo Japan July 3-7 2023 The 65 poster papers presented were carefully reviewed and selected from 311 submissions This set of posters was complemented with the other poster contributions submitted for the Poster and Late Breaking results track of the AIED 2023 conference **The Cognitive, Emotional and Neural Correlates of Creativity** Matthijs Baas, Carsten K. W. De Dreu, Bernard A. Nijstad, 2015-08-06 Across species humans have an unsurpassed capacity for creative thought and innovation Human creativity is at the roots of extraordinary achievements in the arts and sciences and enables individuals and their groups to adapt flexibly to changing circumstances to manage complex social relations and to survive and prosper through social technological and medical innovations The ability to generate novel and potentially useful ideas and problem solutions viz creativity is a key driver of human evolution and among the most valued and sought after competencies in contemporary societies that struggle with complex problems and compete for technological and economic supremacy Because creativity provides fitness functionality in both ancestral and contemporary societies it stands to reason that i the human brain evolved to sustain and promote creative thinking and we should be able to identify ii the brain circuitries genetic drivers and neurohormonal modulators of the human capacity for creative problem solving and original ideation and iii the core cognitive and emotional processes underlying creative thought In this Research Topic we bring together a collection of papers to provide an encyclopedic open access snapshot of the current state of the art on the neural cognitive and emotional correlates of creativity **The Handbook of Fatigue Management in Transportation** Christina M. Rudin-Brown, Ashleigh J. Filtness, 2023-08-02 In the world of transportation fatigue is a silent killer that can affect us all Understanding fatigue including how to manage it to minimize

safety risk is of great importance. However while it is one thing to recognize that fatigue is a critical safety issue it is quite another to set up a successful scientifically informed fatigue risk management programme. This book is here to help. It has been carefully designed as a comprehensive reference point bringing together international expertise from leaders in fatigue science and showcasing valuable insights from transportation industry practitioners. The 40 authored chapters are divided into six sections to better understand fatigue science, the consequences of fatigue in transportation, contributors to fatigue, managing fatigue and promoting alertness, real world case studies of fatigue management in practice and future perspectives. While it is possible to read each chapter in isolation, most will be gained by reading the book as a whole. Each chapter starts with an abstract overview and concludes with summary bullet points creating a handy quick check for key points. This accessible text is for those who are interested in supporting alert and safe transportation operations. It is suitable for professionals, transport managers, government advisors, policy makers, students, academics and anyone who wants to learn more. All transport modes, road, rail, maritime and aviation are considered. For anyone waking up to the complex challenge of fatigue management, this handbook is a must.

**Physical Activity, Self-Regulation, and Executive Control Across the Lifespan** Sean P. Mullen, Peter Hall, 2016-02-05. There is overwhelming evidence linking increased physical activity with positive changes in cognitive functioning and brain health. Much of what we know about these interrelationships comes from aerobic exercise training studies with older adults and children. This literature has paved the way for the neuroscientific investigation of mechanisms responsible for exercise induced cognitive and brain health enhancement, a list that ranges from molecular changes to systemic changes in executive control and neural connectivity. A new perspective has also emerged that aims to understand executive control processes that may underlie the regulation of health behavior. In accordance with this view, physical activity falls under the umbrella of health behaviors that require a substantial amount of executive control. Executive control is a limited resource and the aging process depletes this resource. People who regularly exercise are said to have higher self regulatory control, planning, goal shielding and impulse control than irregular exercisers. The successful maintenance of physical activity participation in lieu of daily cognitive stressors likely reflects an adaptive resistance to control failures. Indeed, a handful of studies have shown the relationship between greater executive control and subsequently higher levels of physical activity. However little is known about the neural correlates of physical activity adherence or sedentary behavior with the view that neurocognitive factors have an antecedent and reciprocal influence on these behaviors. No research has focused on the brain networks responsible for the self regulation of physical activity which likely overlaps with structures and functions playing critical roles in the regulation of other health behaviors. Interdisciplinary investigations

are needed to explain the extent to which physical activity self regulation and self regulatory failure is dependent upon or under the influence of executive control processes and brain networks Understanding the degree to which self regulatory resources may be enhanced restored and trained will have enormous implications for basic science and applied fields It is also of great import to understand whether or not physical activity self regulation is a domain specific behavior associated with specific brain networks or to determine the extent to which regulatory network sharing occurs The aim of this Frontiers Research Topic is to curate contributions from researchers in social and cognitive neurosciences and related fields whose work involves the study of physical activity behavior self regulation and executive control For this Research Topic we therefore solicit reviews original research articles and opinion papers which draw theoretical or empirical connections related to sustained physical activity behavior self regulatory strategies cognitive performance and brain structure and function While focusing on work in the neurosciences this Research Topic also welcomes contributions in the form of behavioral studies psychophysiological investigations and methodological innovations This Frontiers Research Topic will carve out new directions for the fields of exercise cognitive and social neurosciences We hope you will consider submitting your work

Mapping Human Sensory-Motor Skills for Manipulation onto the Design and Control of Robots Matteo Bianchi,Gionata Salvietti,2019-03-25 Humans are endowed with extraordinary sensory motor capabilities that enable a successful interaction with and exploration of the environment as is the case of human manipulation Understanding and modeling these capabilities represents an important topic not only for neuroscience but also for robotics in a mutual inspiration both to inform the design and control of artificial systems and at the same time to increase knowledge on the biological side Within this context synergies i e goal directed actions that constrain multi DOFs of the human body and can be defined at the kinematic muscular neural level have gained increasing attention as a general simplified approach to shape the development of simple and effective artificial devices The execution of such purposeful sensory motor primitives on the biological side leverages on the interplay of the sensory motor control at central and peripheral level and the interaction of the human body with the external world This interaction is particularly important considering the new concept of robotic soft manipulation i e soft adaptable yet robust robotic hands that can deform with the external environment to multiply their grasping and manipulation capabilities Under this regard a preeminent role is reserved to touch being that skin is our primary organ to shape our knowledge of the external world and hence to modify it in interaction with the efferent parts This Research Topic reports results on the mutual inspiration between neuroscience and robotics and on how it is possible to translate neuroscientific findings on human manipulation into engineering guidelines for simplified systems able to take full advantage from the interaction and hence exploitation of environmental constraints for task accomplishment and knowledge acquisition
