2-11: Solving Systems by Elimination (Part 3)

Learning Goals

I will be able to:

- Recognize that multiplying an equation by a factor creates an equivalent equation whose graph is the same as that of the original equation.
- Solve systems of equations by multiplying one or both equations by a factor and then adding or subtracting the equations to eliminate a variable.
- Understand that solving a system by elimination or by substitution entails creating one or more equivalent systems that would enable us to solve the original one.

Essential Question: How does multiplying the equations help us solve a system of linear equations?

Engagement: Multiplying Equations By a Number

Consider two equations in a system:

$$\begin{cases} 4x + y = 1 & \text{Equation A} \\ x + 2y = 9 & \text{Equation B} \end{cases}$$

1. Use graphing technology to graph the equations. Then, identify the coordinates of the solution.
2. Write a few equations that are equivalent to equation A by multiplying both sides of it by the same number, for example, 2, -5, or $\frac{1}{2}$. Let's call the resulting equations A1, A2, and A3. Record your equations here:
 - a. Equation A1:
 - b. Equation A2:
 - c. Equation A3:
3. Graph the equations you generated. Make a couple of observations about the graphs.
