Solutions in Coastal Wetland to Adapt to Changing Environment Qing Wang, Dongdong Shao,Yu Zhang,Qin Zhu,2025-06-05
Coastal wetlands provide precious ecological services for us like coastal protection carbon storage flooding mitigation
production and so on Mangrove saltmarsh sea grass oyster reef and coral reef are typical types of coastal wetland each type
has its unique adaptive strategy to climate change through some processes and mechanisms Some of them are well known to
us but most are unrecognized as they are far away from our living environment Furthermore in the context of climate change
and anthropogenic influence the external disturbance is more complicated and changeable causing the responses of species
and the related processes more secluded and unpredictable Therefore the multilevel processes or mechanisms in coastal
wetland to adapt to climate change as well as the solutions is urgent and important to face the new challenges Coastal
wetlands lie in the transition zone between lands and seas defending us from storms and floodings and providing important
and valuable ecosystem services such as carbon stock and biodiversity maintenance However coastal wetlands are vulnerable
and are one of the most physically disturbed ecosystems on earth because they are always in hydrodynamic conditions under
the interactions among tides waves runoffs and so on Furthermore the combined impacts of climate change and human
activities have caused more uncertainties and complexities on the environmental factors which imposed unparalleled impacts
on the diversity distribution and ecological performance of coastal wetland ecosystem globally **World Ocean**
