## 10th Geometry Spring Break Packet 2013:

A Body Made Home K. Marshall Green, 2026-02-24 A memoir and mythography of a Black trans man's invention of self and home through gender race and trans theory made personal In a country built on the daily oppression and incarceration of Black people on the rejection of queer and trans rights how does a Black trans man become himself or find home Home is commonly understood as a place of bodily safety a place where one can find themselves a resting place but for me and for many Black queer folk our bodies most often preclude any home making with those kinds of securities It is this reality that spurred K Marshall Green's investigation into bodies and the love between them discounted by the mainstream as deviant deficient and defective In his powerful debut memoir Green recounts his lifelong transition from Baby Girl to Black Boi his current and future self Laced through his accounts of traversing discrimination misunderstanding and abuse from family society and academia are experiments in letter writing and biomythography continuing in the literary tradition of Audre Lorde Through A Body Made Home Green explores the long stuttering arc of transition and reckons with the possibility and fantasy of home as a Black queer person in America unearthing the truth of transformation and recasting dreams of freedom

*Geophysics* Henglei Zhang, Meixia Geng, Victor Sacek, Filippo Greco, Penfei Liu, 2024-01-26 Knowledge of the density of the subsurface of a planet is crucial in determining its interior structure and one can estimate the average bulk crustal density directly using the admittance between topography and gravity which has been successfully used for the Moon and is being extended to Mars The interpretation of gravity data is commonly done by computation of a gravity anomaly GA by correcting

the raw data for a number of factors that impact the gravity field Depending on the target science different types of GA can be computed the interpretation of which have been widely employed in geophysics to explore the interior of the Earth and other planets through applications in airborne gravity near surface geophysics regional geophysics and planetary geophysics Yet how to extract a great variety of information from GAs for applications in geophysics entails further investigation Over the decades remarkable progress has been made to extract information from GAs identified from data For instance a series of 3D inversion algorithms facilitates the extraction of the subsurface density distribution With the improved processing based on dense gravity observations that yield high precision and high resolution GAs more detailed geological information can be unveiled When using the admittance between topography and gravity to estimate the crustal density it is essential to identify what kinds of GAs to be used such as Bouguer gravity or free air gravity Also what appropriate approaches to scrutinize the applications of GAs in various case studies e g calculating the geoid and estimating the elastic thickness need to be decoded
