Semiconductor Design and Implementation Issues in Integrated Vehicle Electronics John H. Hall,2005 This major
research study provides a fresh critical look at the way automobile electronics are and should be built Written by Silicon
Valley pioneer John Hall this book is based on his nearly 40 years of experience in developing and producing semiconductors
for the automobile industry and other customers Highly readable and comprehensible for even beginning students of
electronics and semiconductor design this volume provides an in depth explanation of the factors to be considered when
building vehicle systems Starting with a concise history of vehicle electronics Hall walks the reader through the
environmental conditions faced by these systems and the variety of failure mechanisms that can occur Basic and advanced
semiconductor issues raised by vehicle implementation are then discussed in detail A wide range of issues confronting
designers from over marketing of risky features to time and cost constraints are explained Complex electronic modules from
many different manufacturers are examined and discussed as real world case studies of good and bad design techniques Hall
concludes by providing design recommendations that will allow vehicle electronics system developers to build much tougher
devices at little or no incremental production cost This book is the first major work to focus on key issues emerging as major
causes of safety and performance problems Vehicle makers increasingly seek market advantages by providing ever more
capable electronics in their products While these features add much value to vehicles they fail in ways that are beyond the
experience and comprehension of most technicians and accident investigators By combining decades of design experience
and innovation with extensive research Hall has produced unique insights and explanations so engineers can prevent most or
perhaps all of these problems John Hall is one of Silicon Valley s most prolific independent pioneers and inventors He
founded Union Carbide s semi conductor operation in 1962 He is a founder of Interstil and Micro Power Systems He is the
inventor of the first electronic watch first LCD digital watch first CMOS liquid crystal display hand held calculator color
autofocus cameras among many successful commercial products He has worked for many American and foreign automakers
on specific projects such as integrated two way radios and seat belt interlocks He is working with DoD on hardening
