## WARNING

### ELECTRICAL SHOCK HAZARD.

Disconnect electrical power to the furnace before starting installation. Failure to do so could result in serious injury from electrical shock.

### SHARP EDGES HAZARD.

Sharp edges may cause serious injury from cuts.

Use care when making plenum openings and handling ductwork.

### RISK OF SCALDING.

Water temperatures above 120°F can cause severe burns and could instantly shut off the hot water supply. Before backflushing or repairing, wait until water reaches safety level.

## CAUTION

### RISK OF PROPERTY AND EQUIPMENT DAMAGE.

- Do not install humidifier where freezing temperatures could occur. The water line could freeze and crack causing water damage to the home.
- Do not install humidifier on the furnace plenum.
- Do not install humidifier on a plenum floor where the plenum air flow of the cooling coil will restrict air movement through the humidifier.
- Do not set humidity level above recommended or to recommended level if condensation occurs on inside surfaces of any uncoated metal, as condensation damage may result. Excessive humidity can cause moisture accumulation which can allow the possibility for mold growth in the home.

- Do not connect the Model 700 or 700M water coil to multi-speed furnace blowers, motors or bypass motors, other than 120 VAC. Permanent component failure may result. Use Research Products Corporation Model 30 Current Sensing Relays.
- When installing Humidifier Control on a domestic furnace, ensure blower continues to run after a heat call is satisfied to eliminate high temperatures from damaging the Control.
- Do not install humidifier where static pressure exceeds 125 ps, since damage to the humidifier may result. Follow codes in effect concerning pressure reduction.
- Do not install humidifier on the supply plenum where static pressure exceeds 0.4 in. w.c.
