Airport Passenger Terminal Planning and Design: Spreadsheet models and user's guide Landrum & Brown, 2010

TRB's Airport Cooperative Research Program ACRP Report 25 Airport Passenger Terminal Planning and Design comprises a guidebook, spreadsheet models, and a user's guide in two volumes and a CD ROM intended to provide guidance in planning and developing airport passenger terminals and to assist users in analyzing common issues related to airport terminal planning and design. Volume 1 of ACRP Report 25 explores the passenger terminal planning process and provides in a single reference document the important criteria and requirements needed to help address emerging trends and develop potential solutions for airport passenger terminals. Volume 1 addresses the airside terminal building and landside components of the terminal complex. Volume 2 of ACRP Report 25 consists of a CD ROM containing 11 spreadsheet models which include practical learning exercises and several airport-specific sample data sets to assist users in determining appropriate model inputs for their situations and a user's guide to assist the user in the correct use of each model. The models on the CD ROM include such aspects of terminal planning as design hour determination, gate demand, check-in, and passenger and baggage screening, which require complex analyses to support planning decisions. The CD ROM is also available for download from TRB's website as an ISO image.

Runway Overrun and Collision Southwest Airlines Flight 1248, Boeing 737-7H4, N471WN, Chicago Midway International Airport, Chicago, Ill, December 8, 2005 United States. National Transportation Safety Board, 2007. On December 8, 2005, about 1914 central standard time, Southwest Airlines SWA flight 1248, a Boeing 737-7H4, N471WN, ran off the departure end of runway 31C after landing at Chicago Midway International Airport, Chicago, Illinois. The airplane rolled through a blast fence, an airport perimeter fence, and onto an adjacent roadway where it struck an automobile before coming to a stop. A child in the automobile was killed; one automobile occupant received serious injuries, and three other automobile occupants received minor injuries. Eighteen of the 103 airplane occupants, 98 passengers, 3 flight attendants, and 2 pilots received minor injuries, and the airplane was substantially damaged. The airplane was being operated under the provisions of 14 Code of Federal Regulations Part 121 and had departed from Baltimore Washington International Thurgood Marshall Airport, Baltimore, Maryland, about 1758 eastern standard time. Instrument meteorological conditions prevailed at the time of the accident flight, which operated on an instrument flight rules flight plan. The National Transportation Safety Board determined that the probable cause of this accident was the pilots' failure to use available reverse thrust in a timely manner to safely slow or stop the airplane after landing, which resulted in a runway overrun. This failure occurred because the pilots' first experience and lack of familiarity with the airplane's autobrake system distracted them from thrust reverser usage during the challenging landing. The safety issues discussed in this report include the flight crew's decisions and actions, the clarity of assumptions used in on-board performance computers, SWA policies, guidance, and training, arrival landing distance assessments, and safety margins, runway surface condition assessments, and braking action.
