development of that system since the abandonment of radical Maoism and the inauguration of Reform and Opening in the late 1970s. The principal focus is on formal education in schools and conventional institutions of tertiary education but there is also some discussion of preschools, vocational training and learning in non formal contexts. The book begins with a discussion of the historical and comparative context for evaluating China's educational achievements followed by an extensive discussion of the key transitions in education policymaking during the Reform and Opening period. This informs the subsequent examination of changes affecting the different phases of education from preschool to tertiary level. There are also chapters dealing specifically with the financing and administration of schooling, curriculum development, the public examinations system, the teaching profession, the phenomenon of marketisation and the international dimension of Chinese education. The book concludes with an assessment of the social consequences of educational change in the post Mao era and a critical discussion of the recent fashion in certain Western countries for hailing China as an educational model. The analysis is supported by a wealth of sources, primary and secondary, textual and statistical, and is informed by both authors' wide ranging experience of Chinese education. As the first monograph on China's educational development during the forty years of the post Mao era, this book will be essential reading for all those seeking to understand the world's largest education system. It will also be crucial reference for educational comparativists and for scholars from various disciplinary backgrounds researching contemporary Chinese society.

Public Examinations Examined Thomas Kellaghan, Vincent Greaney, 2019-11-19

High stakes public examinations exert a dominant influence in most education systems. They affect both teacher and student behavior especially at the middle and upper levels of secondary education. The content of past examinations tends to dictate what is taught and how it is taught and more important what is learned and how it is learned. By changing aspects of these examinations especially their content and format, education systems can have a strong positive impact on teacher behavior and student learning, help raise student achievement levels and better prepare students for tertiary level education and for employment. Examination agencies, many of which have followed the same procedures over decades, can learn from the successes and failures of other systems. This book addresses current issues related to the development, administration, scoring and usage of these high stakes public examinations, identifying key issues and problems related to examinations in many emerging market economies as well as in advanced economies. The book's primary audience consists of public examination officials on national, regional and state examination boards but the book should also be of interest to senior education policy makers concerned with certification and learning achievement standards, to academics and researchers interested in educational assessment, to governmental and education agencies responsible for student selection and to professionals at development organizations. This extremely well written and comprehensive book offers a timely review of the diversity of public examination practices worldwide, of the tensions between examinations and learning and of the technical expertise involved in the creation of valid

reliable and fair assessments It reminds us that as the diploma disease takes hold with an ever greater intensity at every stage of education worldwide and the commercial business of testing flourishes those concerned with educational quality and meaningful learning must be on guard to prevent the assessment tail wagging the educational dog Angela W Little Professor Emerita Institute of Education University College London This book is very well structured and written and draws on the authors remarkable global knowledge across countries and histories It will be a great asset both to administrators responsible for examinations and to academics and other professionals who seek to understand the nature and impact of examinations of different types and in different settings Mark Bray UNESCO Chair Professor of Comparative Education University of Hong Kong and former Director UNESCO International Institute for Educational Planning I am sure that Public Examinations Examined which thoroughly analyzes the practice of public examinations in different countries and makes profound and well grounded conclusions will arouse very great interest and will serve to further improve public examinations Victor Bolotov Distinguished Professor Higher School of Economics National Research University Moscow member Russian Academy of Education and former Deputy Minister of Education Russian Federation     Turn-taking in human communicative interaction Judith Holler, Robin H. Kendrick, Marisa Casillas, 2016-05-09 The core use of language is in face to face conversation This is characterized by rapid turn taking This turn taking poses a number central puzzles for the psychology of language Consider for example that in large corpora the gap between turns is on the order of 100 to 300 ms but the latencies involved in language production require minimally between 600 ms for a single word or 1500 ms for as simple sentence This implies that participants in conversation are predicting the ends of the incoming turn and preparing in advance But how is this done What aspects of this prediction are done when What happens when the prediction is wrong What stops participants coming in too early If the system is running on prediction why is there consistently a mode of 100 to 300 ms in response time The timing puzzle raises further puzzles it seems that comprehension must run parallel with the preparation for production but it has been presumed that there are strict cognitive limitations on more than one central process running at a time How is this bottleneck overcome Far from being easy as some psychologists have suggested conversation may be one of the most demanding cognitive tasks in our everyday lives Further questions naturally arise how do children learn to master this demanding task and what is the developmental trajectory in this domain Research shows that aspects of turn taking such as its timing are remarkably stable across languages and cultures but the word order of languages varies enormously How then does prediction of the incoming turn work when the verb often the informational nugget in a clause is at the end Conversely how can production work fast enough in languages that have the verb at the beginning thereby requiring early planning of the whole clause What happens when one changes modality as in sign languages with the loss of channel constraints is turn taking much freer And what about face to face communication amongst hearing individuals do gestures gaze and other body behaviors facilitate turn taking One can also ask the phylogenetic

question how did such a system evolve There seem to be parallels analogies in duetting bird species and in a variety of monkey species but there is little evidence of anything like this among the great apes All this constitutes a neglected set of problems at the heart of the psychology of language and of the language sciences This Research Topic contributes to advancing our understanding of these problems by summarizing recent work from psycholinguists developmental psychologists students of dialog and conversation analysis linguists phoneticians and comparative ethologists
