

**Objectivity: An Introduction**

Students demonstrate an ability to describe an important phenomenon, determine which factors the phenomenon affects and explain it by naming the principle of conservation. The list of phenomena that illustrate objectivity are: gas pressure, atmospheric pressure, mechanical energy. The typical phenomenon that we bring into physics lessons is the pressure of the particles that create matter (gas), which is explained by the kinetic theory of gases. We bring in the phenomenon that pressure depends on surface pressure, and it becomes obvious that pressure is directly proportional to the surface pressure. We also bring in the phenomenon that pressure is directly proportional to the depth of submersion in the gas, but these two phenomena require explanation similar to that of the pressure on surface pressure. In other words, we need to explain changes in the right units and direction, including physical phenomena.

We will discuss the phenomena of pressure, atmospheric pressure, and mechanical energy. We will also discuss the concept of the following three phenomena:

1. Pressure depends on surface area.

2. Pressure depends on density.
