High Performance Embedded Computing Handbook David R. Martinez, Robert A. Bond, M. Michael Vai, 2018-10-03 Over the past several decades applications permeated by advances in digital signal processing have undergone unprecedented growth in capabilities The editors and authors of High Performance Embedded Computing Handbook A Systems Perspective have been significant contributors to this field and the principles and techniques presented in the handbook are reinforced by examples drawn from their work The chapters cover system components found in today's HPEC systems by addressing design trade offs implementation options and techniques of the trade then solidifying the concepts with specific HPEC system examples This approach provides a more valuable learning tool Because readers learn about these subject areas through factual implementation cases drawn from the contributing authors own experiences Discussions include Key subsystems and components Computational characteristics of high performance embedded algorithms and applications Front end real time processor technologies such as analog to digital conversion application specific integrated circuits field programmable gate arrays and intellectual property based design Programmable HPEC systems technology including interconnection fabrics parallel and distributed processing performance metrics and software architecture and automatic code parallelization and optimization Examples of complex HPEC systems representative of actual prototype developments Application examples including radar communications electro optical and sonar applications The handbook is organized around a canonical framework that helps readers navigate through the chapters and it concludes with a discussion of future trends in HPEC systems The material is covered at a level suitable for practicing engineers and HPEC computational practitioners and is easily adaptable to their own implementation requirements *Cutting Edge Robotics*, 2010 **Mac OS X Tiger for Unix Geeks** Brian Jepson, Ernest E. Rothman, 2005-06-01 If you're one of the many Unix developers drawn to Mac OS X for its Unix core you'll find yourself in surprisingly unfamiliar territory Unix and Mac OS X are kissing cousins but there are enough pitfalls and minefields in going from one to another that even a Unix guru can stumble and most guides to Mac OS X are written for Mac aficionados For a Unix developer approaching Tiger from the Mac side is a bit like learning Russian by reading the Russian side of a Russian English dictionary Fortunately O'Reilly has been the Unix authority for over 25 years and in Mac OS X Tiger for Unix Geeks that depth of understanding shows This is the book for Mac command line fans Completely revised and updated to cover Mac OS X Tiger this new edition helps you quickly and painlessly get acclimated with Tiger's familiar yet foreign Unix environment Topics include Using the Terminal and understanding how it differs from an xterm Using Directory Services Open Directory LDAP and NetInfo Compiling code with GCC 3 Library linking and porting Unix software Creating and installing packages with Fink Using DarwinPorts Search through metadata with Spotlight's command line utilities Building the Darwin kernel Running X Windows on top of Mac OS X or better yet run Mac OS X on a Windows machine with PearPC Mac OS X Tiger for Unix Geeks is the ideal survival guide for taming the Unix side of Tiger If

you're a Unix geek with an interest in Mac OS X you'll find this clear concise book invaluable      *Computational Science - ICCS 2006* Vassil Alexandrov, 2006-05-26 The four volume set LNCS 3991 3994 constitutes the refereed proceedings of the 6th International Conference on Computational Science ICCS 2006 held in Reading UK in May 2006 The main conference and its 32 topical workshops attracted over 1400 submissions The 98 revised full papers and 29 revised poster papers of the main track presented together with 500 accepted workshop papers were carefully reviewed and selected for inclusion in the four volumes The papers span the whole range of computational science with focus on the following major themes tackling grand challenges problems modelling and simulations of complex systems scalable algorithms and tools and environments for computational science Of particular interest were the following major recent developments in novel methods and modelling of complex systems for diverse areas of science scalable scientific algorithms advanced software tools computational grids advanced numerical methods and novel application areas where the above novel models algorithms and tools can be efficiently applied such as physical systems computational and systems biology environmental systems finance and others
