### **Multivariate and Probabilistic Analyses of Sensory Science**

**Problems** Jean-François Meullenet, Rui Xiong, Christopher J. Findlay, 2008-02-28 Sensory scientists are often faced with making business decisions based on the results of complex sensory tests involving a multitude of variables. *Multivariate and Probabilistic Analyses of Sensory Science Problems* explains the multivariate and probabilistic methods available to sensory scientists involved in product development or maintenance. The techniques discussed address sensory problems such as panel performance, product profiling and exploration of consumer data including segmentation and identifying drivers of liking. Applied in approach and written for non-statisticians, the text is aimed at sensory scientists who deal mostly with descriptive analysis and consumer studies. *Multivariate and Probabilistic Analyses of Sensory Science Problems* offers simple, easy-to-understand explanations of difficult statistical concepts and provides an extensive list of case studies with step-by-step instructions for performing analyses and interpreting the results. Coverage includes a refresher on basic multivariate statistical concepts, use of common data sets throughout the text, summary tables presenting the pros and cons of specific methods and the conclusions that may be drawn from using various methods, and sample program codes to perform the analyses and sample outputs. As the latest member of the IFT Press series, *Multivariate and Probabilistic Analyses of Sensory Science Problems* will be welcomed by sensory scientists in the food industry and other industries using similar testing methodologies, as well as by faculty teaching advanced sensory courses and professionals conducting and participating in workshops addressing multivariate analysis of sensory and consumer data.

### **Strategies in Global Industries**

**Allen Morrison**, 1990-06-12 This insightful monograph explodes some of the myths introduced by well-known business consultants and by strategic planning academics and replaces myth with a comprehensive model of business strategies that is applicable to the contemporary marketplace where international trade and competitiveness are issues of critical concern. Today's American businesses are challenged both at home and abroad in market battles that frequently threaten the survival of entire domestic industries. In *Strategies in Global Industries*, Morrison develops a comprehensive model of business strategies that is a prescription for increasing the competitiveness of U.S. companies. He argues that many U.S. firms misperceive global industry opportunities and as a consequence pursue strategies that may suboptimize performance. Indeed, Morrison found little evidence that U.S. businesses are actually competitive on a global scale. Results of his study of 115 global U.S. companies that have annual average sales of over 900 million form the basis for his groundbreaking conclusions that will have wide applicability to global concerns. The study's conceptual foundation consists of an integration of the contingency perspective of

strategic management and the industry organization perspective of the business s context These two perspectives are vital to an in depth understanding of the relationship between business strategy and performance in global industries Four appendixes detail the survey instrument and SIC Code related data Twenty six figures graphically display information relating to strategy classification research methodology global industries key business unit characteristics strategy types and dimensions in global industries and more An important contribution to the vital study of U S competitiveness on a global scale the volume offers many fact based new insights into ways to foster and improve the competitiveness of U S companies
