- Low battery indicator
- Ultra sensitive synchronous detector 16 section bargraph to show RF signal strength

Controls

1. Power Switch - This slide switch turns the counter on and initiates a 2 second test of all the LCD segments.

3. Hold Button - This holds the current display and stops the counter from counting.
4. Gate Button - This selects the gate or measurement time. A longer gate time allows counting for longer period and results in higher accuracy.
5. Calibration - The calibration adjustment opening is located on the front panel of the counter. This allows access to the trimmer capacitor that provides about a 10 PPM adjustment range of the time base oscillator. This is not usually necessary but to do so read a signal of a known frequency before adjusting the trimmer for correct frequency display. If you calibrate at 4.1943 MHz or above then the counter will be more accurate.
