J. Greenspan, C. P. Kyriacou, 1994 Animal behaviors are among the most diverse and complex products of evolution They represent a major source of variation both within and between populations As with all aspects of evolution there are boundaries that determine the freedom of behavioral characteristics to vary To understand the causes and consequences of such variation it is essential to define these boundaries Defining them in turn requires that we

understand the biological substrates of behavior and how they are subject to variation In this unique volume 58 international experts attempt to analyze and discuss the elements of behavior at many different levels and from many different disciplines By focusing on the flexible and constrained aspects of behavior they have been able to look for common themes in the biological strategies for organizing and producing behavior that exist at molecular physiological and evolutionary levels They discuss the role of development and circuit modulation as well as the versatile roles of individual genes and individual cells in them Throughout they have taken an integrative look at a subject that demands this kind of approach This volume should be of interest to behaviorists neuroscientists behavioral ecologists and psychologists Goal of this Dahlem Workshop to examine the factors contributing to flexibility and constraint in behavior molecular genetic physiological evolutionary and to explore their contribution to a deeper understanding of the interplay between behavior and evolution Physics Essays ,1995
