

# Performance Tuning Guide

Q3 2017 for Mule 3.8.x

---

This Tuning Guide provides a set of recommendations from MuleSoft experts on how to tune applications running on Mule 3.8.x<sup>1</sup> for optimal performance. The document first provides context as to why and when performance tuning matters, before outlining methodologies and discussing best practices. Examples are mentioned throughout the report, and can be explored in greater detail with information found in the References section.

<sup>1</sup> Starting Mule 3.8.0 Runtime, API Gateway Runtime is unified with core Mule runtime.

*Goal-oriented Memory Allocation in Database Management Systems* Kurt P. Brown,1995 Abstract In order to meet the individual performance goals of each class in a complex multiclass database workload today s database management systems require the adjustment of a number of low level performance knobs such as buffer pool sizes multiprogramming levels data placement dispatching priorities etc As the complexity of database systems is increasing while their cost is declining at the same time manually adjusting low level DBMS performance knobs will become increasingly impractical Ideally the DBMS should simply accept per class performance goals as inputs and it should adjust its own low level knobs in order to achieve them this self tuning capability is called goal oriented resource allocation This thesis makes three contributions in the area of goal oriented resource allocator for database management systems First it defines an overall architecture for goal oriented resource allocation that includes techniques to insure a stable and responsive system and to accurately gather performance measurement statistics Second it presents an algorithm that can adjust per class disk buffer allocation knobs in order to achieve performance goals for those classes whose performance is primarily affected by their disk buffer hit rates Finally it presents an algorithm for controlling the memory allocation and multiprogramming level for those classes primarily affected by their use of sort and join work areas this algorithm is designed to work in conjunction with the disk buffer memory

allocation algorithm in order to provide a comprehensive goal oriented memory management solution
