

Each system includes J-SAC modules as required to support the security and access control systems implemented.

SOU programming

No special project programming is required to enable multiple site security and access control systems. When running the RPS4 tool, each site receives 100% of the resources for that site.

Note that all profiles must be sent to the site C headquarters when the project is finished.

ACDB/KDC operation

At the headquarters site, all three profiles are imported into the ACDB/KDC program. The result is a global tree of resources that includes each KPDSNP and CRC device in each site.

Importing all the profiles into one ACDB/KDC program creates the global database.

When additions or changes to the KPDSNP database are made, headquarters can transmit the changes to the affected sites.
