

BIOLOGY EOC STUDY GUIDE

Unit 1: Scientific Inquiry and Biological Principles

- 1-Differentiate between dependent and independent variables. Which goes on the X axis and the Y axis? Give an example of each variable.
- 2-Define control group and experimental group. Why is a control critical for scientific inquiry?
- 3-Differentiate between qualitative and quantitative data.
- 4-List the appropriate steps of the scientific method.
- 5-Differentiate between light microscopes and electron microscopes.
- 6-Define theory and scientific law.
- 7-What is the total magnification if the eyepiece is 10x and the low power objective is 4?
What is the total magnification if the eyepiece is 10x and medium power objective is 10?
What is the total magnification if the eyepiece is 10x and high power objective is 45?
- 8-If you move the slide to the left on the stage, in what direction does it appear to move as you look through the eyepiece?
- 9-Describe the function of these microscope parts: eyepiece, diaphragm, fine adjustment, coarse adjustment, high power objective, low power objective, stage, stage clips.
- 10-Discuss the characteristics of all living organisms.

Unit 2: Molecular Biology

- 11-Discuss atomic structure and function.
- 12-Differentiate between ionic and covalent bonds.
- 13-What is polarity and why is it important to all living things?
- 14-Differentiate between adhesion and cohesion.
- 15-What are the basic components of the pH scale and give examples of substances that fall into each category.
- 16-What is a buffer? Why is it significant in living organisms?
- 17-What are the subunits and functions of the four main types of organic chemicals (carbohydrates, lipids, nucleic acids, proteins)?
- 18-Distinguish between mono-, di- and polysaccharides.
- 19-How are organic molecules different from inorganic molecules such as H_2O , O_2 , CO_2 , and NH_3 ?
- 20-Define steroids and hemoglobin and discuss their role in the body.
- 21-Distinguish between exothermic (exergonic) and endothermic (endergonic) reactions.
- 22-What is ATP? How is it used in the cell? How is it stored in the cell?
- 23-Define activation energy and explain its importance in enzymatic reactions.
- 24-What is the function of enzymes? What type of biological molecule are enzymes? What are the subunits? Why are they considered catalysts?
- 25-Explain the Induced Fit Theory/Lock and Key Model of enzymes. Draw a diagram and label it.
- 26-How do pH and extreme heat affect enzymes? What is the scientific term associated with this effect?

Unit 3: Cells and Living Systems

- 27-List and explain the parts of the cell theory.
- 28-What limits a cell's size?
- 29-What is the difference between prokaryotic and eukaryotic cells?
- 30-What are the basic structures and functions of the following cell organelles: nucleus, plasma membrane, cell wall, mitochondria, vacuoles, chloroplasts and ribosomes.
- 31-Discuss the role of receptor proteins on the surface of cells.
- 32-Differentiate between plant cells and animal cells.

Meeting the Challenges to Measurement in an Era of Accountability Henry Braun, 2016-01-29 Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4-8 Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district Comparatively little has been written about the measurement of achievement in the other grades and subjects This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all It addresses traditional end of course tests as well as alternative measures such as portfolios exhibitions and student learning objectives In each case issues related to design and development psychometric considerations and validity challenges are covered from both a generic and a content specific perspective The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment Edited by leading experts these books are comprehensive and practical resources on the latest developments in the field The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Rethinking Education and Poverty William G. Tierney, 2015-11-01 How can new ways of thinking about education improve the lives of poor students In *Rethinking Education and Poverty* William G Tierney brings together scholars from around the world to examine the complex relationship between poverty and education in the twenty first century International in scope this book assembles the best contemporary thinking about how education can mediate class and improve the lives of marginalized individuals In remarkably nuanced ways this volume examines education's role as both a possible factor in perpetuating and a tool for alleviating entrenched poverty Education has long been seen as a way out of poverty Some critics however argue that educational systems mask inequality and perpetuate cycles of poverty and wealth others believe that the innate resilience or intellectual ability of impoverished students is what allows those individuals to succeed *Rethinking Education and Poverty* grapples in turn with the ramifications of each possibility Throughout these compelling far reaching and provocative essays the contributors seek to better understand how local efforts to reduce poverty through education interact or fail to interact with international assessment efforts They take a broad historical view examining social economic and educational policies from the postWorld War II period to the end of the Cold War and beyond Although there is no simple solution to inequality this book makes clear that education offers numerous exciting possibilities for progress

Processes, Mechanisms and Solutions in Coastal Wetland to Adapt to Changing Environment Qing Wang, Dongdong Shao, Yu Zhang, Qin Zhu, 2025-06-05 Coastal wetlands provide precious ecological

services for us like coastal protection carbon storage flooding mitigation production and so on Mangrove saltmarsh sea grass oyster reef and coral reef are typical types of coastal wetland each type has its unique adaptive strategy to climate change through some processes and mechanisms Some of them are well known to us but most are unrecognized as they are far away from our living environment Furthermore in the context of climate change and anthropogenic influence the external disturbance is more complicated and changeable causing the responses of species and the related processes more secluded and unpredictable Therefore the multilevel processes or mechanisms in coastal wetland to adapt to climate change as well as the solutions is urgent and important to face the new challenges Coastal wetlands lie in the transition zone between lands and seas defending us from storms and floodings and providing important and valuable ecosystem services such as carbon stock and biodiversity maintenance However coastal wetlands are vulnerable and are one of the most physically disturbed ecosystems on earth because they are always in hydrodynamic conditions under the interactions among tides waves runoffs and so on Furthermore the combined impacts of climate change and human activities have caused more uncertainties and complexities on the environmental factors which imposed unparalleled impacts on the diversity distribution and ecological performance of coastal wetland ecosystem globally

Global change ecology: threats and solutions Ming-Chih Chiu, Qinghua Cai, Jhih-Rong Liao, Kozo Watanabe, Vincent Resh, 2024-10-22

Global Change Ecology promotes the understanding of how globally important changes in the environment disrupt all aspects of ecological systems Especially the environmental changes that are driven by human influences and natural processes e g climate change urbanization biological invasion and pollution resulting in biodiversity loss and eco evolutionary deleterious impacts at the scales of populations communities or ecosystems Alternatively the recognition of ecological responses can enhance their resilience and resistance to environmental disturbances in different ecological systems For example the implications of these environmental threats on biodiversity and ecosystems can boost the interventions of strategies and the development of new techniques The management solutions developed aim to increase environmental sustainability and mitigate the ecological impacts on biota in the Anthropocene By collecting multi disciplinary efforts in the form of primary research articles or perspective reviews we can comprehensively understand how global change influences the biota and consequently construct valuable adaptation strategies This Research Topic will examine the effects of a variety of environmental stresses on different organisms e g plants vertebrates invertebrates microorganisms in a range of biomes e g terrestrial freshwater and marine systems In addition our collection of articles will assemble studies on the ecological and evolutionary responses and influences of organisms populations communities and ecosystems under experimental modeled or observed environmental change These efforts can be devoted to the environmental events and the associated impacts at global and regional scales on a long term or short term bases The scope of our Research Topic includes but is not limited to the following interests Ecological responses to climate change and extreme weather Land use change and ecological connectivity Sustainable agriculture and biodiversity

Urbanization and ecological influences Ecological impacts of contaminants and pollutants Ecological changes to biological invasions Climate change mitigations and the shifting distribution of species Mechanisms of eco evolutionary resilience and resistance Environmental protection and restoration techniques and policies Research and datasets for future assessments and modeling Ecological monitoring through the linkages and networks on long term or large scale bases *Application of next-generation sequencing for cancer drug repositioning* Zhi Li,Fengfeng Zhou,Chi Zhang,Huidan Zhang,2022-12-29
