A review of existing publications identified a need for assembling a collection of peer-reviewed and supported expertise that is focused on arts therapies and neuroscience theoretical frameworks, research, and practice. Thus, the goal of this Research Topic is to create an organized and integrated resource that brings together emerging knowledge from neuroscience and arts therapies. A diversity of research methods, art-based modalities, and clinical applications that integrate arts therapies and neuroscience are welcomed. We aspire to further elucidate the unique connections and dialogue between art therapies and neurobiological, multi-modal functions, and advance the current state of the field. We welcome empirical, clinical, and theoretical submissions. A non-exhaustive list of foci of interest includes the interface of arts therapies with the nervous system, endocrine systems, immune systems, stress responses, sensations, and perceptions; visual, tactile, auditory, etc., movement and motor systems; and cortical and subcortical responses related to cognition and affect. Topics of investigation include memory, pain, trauma, stress, resilience, empathy, compassion, positive psychology, mindfulness, psychoneuroimmunology, attachment, and medical arts. Importantly, we aim to include contributions from therapists and researchers engaging in bibliography, crafts, dance, movement, drama, therapy, film, mindfulness, music, neuroaesthetics, play, photography, poetry, psychodrama, and visual arts therapies. Only papers that integrate arts therapies with neuroscience concepts will be considered.
