ratio of energy materials at nanoscale exhibits extraordinary characteristics Various applications relevant to heat transfer energy conversion and storage have increasingly used nanoparticles due to their ability to absorb store and carry heat However successful deployment of materials in energy harvesting and storage applications must also consider some of the very fundamental challenges including but not limited to sedimentation entrainment stability and life of these potential energy materials Additionally there are novel applications of newly developed specialized materials in solar energy capture transport and storage This topic is to circumscribe all challenges innovative applications and numerical studies in materials for energy capture transfer and storage to have a safe future in terms of solar energy utilization

Physiology and Breeding of Cereals Gustavo A. Slafer, Iker Aranjuelo, Roxana Savin, Ignacio Romagosa, 2025-02-14 This Research Topic has been developed in the context of the V Symposium on Physiology and Breeding of Cereals being held in Lleida Catalonia Spain on 8 9 May 2023 The series of Symposia on Physiology and Breeding of Cereals has been aiming to create a fertile space for scientific exchange and to facilitate synergies between scientific groups working on issues relating to the physiology genetics and breeding of cereals These Symposia were initially organized within the context of the research network on Physiology of Yield and Quality for the Improvement of Cereals and continue to be organized by research groups that were part of the network together with others that join this activity We expect to attract submissions of works presented in the symposium as well as others by non attendees Food security is threatened due to population growth increased individual demands and alternative uses for crops including their use as biofuels In addition over the next few decades climate change will affect the quantity and quality of field crops through the compound effects of elevated atmospheric CO₂ as well as changing temperature and rainfall patterns Cereals are by far the most relevant contributors to the world's plant derived food production Despite the efforts made by breeding and crop management approaches field crop production has stagnated in many regions of the world in recent years
