

Right Triangles & Geometric Mean

Altitude, Hypotenuse, Legs

CD is 1 of 3 altitudes that can be drawn in $\triangle ABC$

AC & BC are the other altitudes

★ right \triangle s are the only types where the altitudes are the legs

EXAMPLE:

a) name the altitude drawn from the right \angle of $\triangle XYZ$

b) name the 2 segments that now form the hyp of $\triangle XYZ$ a) ZW b) XW, WY

EXAMPLE:

a) name the legs of $\triangle FEH$

b) name the hyp of $\triangle FEH$

c) name the 2 segments that form the hyp of $\triangle FEH$

a) $\overline{FE}, \overline{HE}$ b) \overline{FH} c) $\overline{FG}, \overline{GH}$

Altitude of a Right Triangle Theorem

the length of the altitude drawn from the right \angle of a right \triangle is the geometric mean of the lengths of the 2 segments that form the hypotenuse.

\overline{AD} is the altitude drawn from the right \angle , therefore the following proportion follows the theorem

$$\frac{BD}{AD} = \frac{AD}{DC}$$

- the altitude is in the "means" position of the proportion. This follows the def of geometric mean

★ apply this th when given the length of the altitude or when finding the length of the altitude

EXAMPLES:

1) Find DF $\frac{18}{x} = \frac{x}{32}$

$$x^2 = 576$$

$$x = 24$$

2) Find SQ

$$\frac{18}{x} = \frac{x}{8}$$

$$x^2 = 144$$

$$x = 12$$

3) Find LN

$$\frac{4}{12} = \frac{12}{x}$$

$$4x = 144$$

$$x = 36$$

Legs of a Right Triangle Theorem

the length of each leg of a right \triangle that has an altitude drawn from the right angle is the geometric mean of the length of the hypotenuse & the length of one of the segments that form the hypotenuse. The leg will be adjacent to that segment.

\overline{AT} is the altitude drawn from the right \angle , therefore the following 2 proportions follow the theorem

$$\frac{BS}{AT} = \frac{AT}{BT} \text{ or } \frac{BS}{AS} = \frac{AT}{TS}$$

★ apply this th when given the length of either leg or when finding the length of either leg

- each leg is in the "means" position of its given proportion. This follows the def of geometric mean

Teaching and Learning Proof Across the Grades Despina A. Stylianou, Maria L. Blanton, Eric J. Knuth, 2010-09-23 A Co Publication of Routledge for the National Council of Teachers of Mathematics NCTM In recent years there has been increased interest in the nature and role of proof in mathematics education with many mathematics educators advocating that proof should be a central part of the mathematics education of students at all grade levels This important new collection provides that much needed forum for mathematics educators to articulate a connected K 16 story of proof Such a story includes understanding how the forms of proof including the nature of argumentation and justification as well as what counts as proof evolve chronologically and cognitively and how curricula and instruction can support the development of students understanding of proof Collectively these essays inform educators and researchers at different grade levels about the teaching and learning of proof at each level and thus help advance the design of further empirical and theoretical work in this area By building and extending on existing research and by allowing a variety of voices from the field to be heard *Teaching and Learning Proof Across the Grades* not only highlights the main ideas that have recently emerged on proof research but also defines an agenda for future study

Analysis of Research in the Teaching of Mathematics Kenneth E. Brown, United States. Office of Education, Theodore Lee Abell, 1965 Mathematics Classrooms: Students' Activities and Teachers' Practices Fabrice Vandebrouck, 2013-09-03 With cooperation of Aline Robert Janine Rogalski Maha Abboud Blanchard Claire Cazes Monique Chappet Paris Aur lie Chesnais Christophe Hache Julie Horoks Eric Roditi Nathalie Sayac This book presents unique insights into a significant area of French research relating the learning and teaching of mathematics in school classrooms and their development Having previously had only glimpses of this work I have found the book fascinating in its breadth of theory its links between epistemological didactic and cognitive perspectives and its comprehensive treatment of student learning of mathematics classroom activity the work of teachers and prospective teacher development Taking theoretical perspectives as their starting points the authors of this volume present a rich array of theoretically embedded studies of mathematics teaching and learning in school classrooms Throughout this book the reader is made aware of many unanswered questions and challenged to consider associated theoretical and methodological issues For English speaking communities who have lacked opportunity to access the French literature the book opens up a wealth of new ways of thinking about and addressing unresolved issues in mathematics learning teaching and teacher education I recommend it wholeheartedly Extract from Barbara Jaworski s preface Lapeer Public Schools Lapeer (Mich.). Student-Led Assessment Starr Sackstein, 2024-01-03 The single greatest authority on student learning is the student

doing the learning but the right structures must be in place for students voices to be clearly heard and truly valued

Conventional formative and summative assessment are most often conducted through one size fits all quizzes and tests that yield narrow predetermined categories of data about students academic progress But if we want a truly accurate look at what how and to what extent students are learning who better to consult than the obvious experts on the matter the students themselves In this lively and comprehensive guide veteran teacher and author Starr Sackstein provides the tools needed to help students compile and present evidence of learning through portfolios and student led conferences from templates and rubrics to personal testimonials reflection questions and activities The book features Forms applicable across grade levels and content areas for unpacking standards co constructing success criteria with students evaluating current classroom practices and more Real life perspectives and scenarios from educators in the field who have embraced portfolios and student led conferences over standardized tests and letter grades Practical experience based guidance for building classroom and schoolwide learning cultures that promote both learner agency and academic achievement The resources recommendations and reflections in Student Led Assessment allow educators at all levels to develop systems and protocols for ensuring student ownership of and pride in their own hard won achievement
