Complexity Theory for a Sustainable Future Jon Norberg, Graeme S. Cumming, 2008 Complexity theory illuminates the many interactions between natural and social systems providing a better understanding of the general principles that can help solve some of today's most pressing environmental issues. Complexity theory was developed from key ideas in economics, physics, biology, and the social sciences, and contributes to important new concepts for approaching issues of environmental sustainability such as resilience, scaling, and networks. Complexity Theory for a Sustainable Future is a hands-on treatment of this exciting new body of work and its applications, bridging the gap between theoretical and applied perspectives in the management of complex adaptive systems. Focusing primarily on natural resource management and community-based conservation, the book features contributions by leading scholars in the field, many of whom are among the leaders of the Resilience Alliance. Theoreticians will find a valuable synthesis of new ideas on resilience, sustainability, asymmetries, information processing, scaling, and networks. Managers and policymakers will benefit from the application of these ideas to practical approaches and empirical studies linked to social-ecological systems. Chapters present new twists on such existing approaches as scenario planning, scaling analyses, and adaptive management, and the book concludes with recommendations on how to manage natural resources, how to involve stakeholders in the dynamics of a system, and how to explain the difficult topic of scale. A vital reference for an emerging discipline, this volume provides a clearer understanding of the conditions required for systems self-organization, since the capacity of any system to self-organize is crucial for its sustainability over time.

Urban Regeneration & Sustainability C.A. Brebbia, A. Galiano-Garrigos, 2016-12-28 Including papers presented at the 11th International Conference on Urban Regeneration and Sustainability held in Alicante, Spain, this book addresses the multidisciplinary aspects of urban planning, a result of the increasing size of cities, the amount of resources and services required, and the complexity of modern society. Most of the earth's population live in cities, and the process of urbanisation continues generating problems originating from the drift of the population towards them. These problems can be resolved by cities becoming efficient habitats, saving resources in a way that improves the standard of living. The process faces a number of challenges related to reducing pollution, improving main transportation and infrastructure systems, and these challenges can contribute to the development of social and economic imbalances, and require the development of new solutions. Large cities are probably the most complex mechanisms to manage, nevertheless, they represent a productive ground for architects, engineers, city planners, social and political scientists, able to conceive new ideas and time them according to technological advances and human requirements. The papers in this book cover such topics as Appropriate technologies for smart cities, Architectural issues, Case studies, sustainable practices, Cultural quarters and interventions, Disaster and emergency response, Eco town planning, Environmental management, Landscape planning and design, Planning for resilience, Quality of life, Socio-economic and political considerations, Pedestrians behaviour in different situations, traffic modelling and safety, Sustainable

Humanizing the Digital Workspace Marko Orel, Matej Černe, Sut

I Wong, 2025-05-09 The digital economy has fundamentally transformed how we live and work, bringing opportunities and challenges. One of the key challenges is understanding how to effectively navigate the relationship between people and technology and harness its power to foster creativity, innovation, and digital leadership. This book examines the relationship between people and technology in the digital workspace from a multidisciplinary perspective. Unlike most of the existing literature which focuses on the technological aspects of digitization in the workplace, this book equally considers the psychological, social, and cultural implications as well. The contributing authors also provide insights on employee well-being, motivation, and engagement, and challenge the assumption that digital technology stifles creativity by demonstrating how innovation can foster collaboration, experimentation, and risk-taking. Featuring research theories, case studies, surveys, and interviews from fields such as sociology, psychology, and management, this book is of interest to scholars, researchers, and students in sociology, psychology, management, and related disciplines, as well as professionals and leaders looking to better understand the impact of technology on the modern workplace

Green Indicators to Inform Circular Economy under

Climate Change, 2nd edition Muhlis Can, Bodo Sturm, Jan Brusselaers, 2025-10-10 The obstacle of climate change is among the major concerns that mankind is experiencing today. Climate change poses remarkable risks to the planet and human health, such as extreme weather conditions, unpredictable rainfall, decreasing agricultural productivity, and lack of food. Thus, we need to find solutions to protect the environment and to maintain sustainable development. To do that, it is important to detect the impact of social and economic parameters on environmental outcomes, such as economic structure, trade volume, and value human capital, education, globalization, green economy, and economic complexity. In this collection, we

aim to expand our knowledge about the relationship between environment and different social and economic indicators which will provide us knowledge to make reliable and long term plans Under these circumstances we need to identify the parameters that impact the environment both positively and negatively Additionally there is need that we prepare long term plans to maintain technological social and economic development for a sustainable ecology and biological life Thanks to this Research Topic we aim to expand our knowledge about the potential micro and macro determinants of environmental quality and sustainable development such as economic activities green economic and growth indicators specifically with respect to developments in green economy green trade green finance and green innovation as they pertain to circular economy and changing economic complexity Potential topics include but are not limited to Innovation economic structure and environmental quality Trade and environment relationship Green Economy Indicators such as Green Finance Green Trade Green Products and Green Innovation and their economic and environmental impacts Economic complexity and its environmental consequences Circular Economy as a driver of sustainable development Theoretical formulation and empirical analysis of green economy and green growth Economic and social determinants of sustainable development
