Proceedings of 17th Symposium on Earthquake Engineering (Vol. 3) Manish Shrikhande, Pankaj Agarwal, P. C. Ashwin Kumar, 2023-07-03 This book presents select proceedings of the 17th Symposium on Earthquake Engineering organized by the Department of Earthquake Engineering Indian Institute of Technology Roorkee. The topics covered in the proceedings include engineering seismology and seismotectonics, earthquake hazard assessment, seismic microzonation and urban planning, dynamic properties of soils and ground response, ground improvement techniques for seismic hazards, computational soil dynamics, dynamic soil structure interaction, codal provisions on earthquake resistant design, seismic evaluation and retrofitting of structures, earthquake disaster mitigation and management and many more. This book also discusses relevant issues related to earthquakes such as human response and socioeconomic matters, post earthquake rehabilitation, earthquake engineering education, public awareness, participation and enforcement of building safety laws and earthquake prediction and early warning system. This book is a valuable reference for researchers and professionals working in the area of earthquake engineering. Ultra-low-Cycle Fatigue Failure of Metal Structures under Strong Earthquakes Liang-Jiu Jia, Hanbin Ge, 2018-11-02 This book presents experimental results and theoretical advances in the field of ultra low cycle fatigue failure of metal structures under strong earthquakes where the dominant failure mechanism is ductile fracture. Studies on ultra low cycle fatigue failure of metal materials and structures have caught the interest of engineers and researchers from various disciplines such as material, civil and mechanical engineering. Pursuing a holistic approach, the book establishes a fundamental framework for this topic while also highlighting the importance of theoretical analysis and experimental results in the fracture evaluation of metal structures under seismic loading. Accordingly, it offers a valuable resource for undergraduate and graduate students interested in ultra low cycle fatigue, researchers investigating steel and aluminum structures and structural engineers working on applications related to cyclic large plastic loading conditions.

Constitutive Models for Rubber Al Dorfmann, Alan Muhr, 1999-01-01 This text aims to enable the experience accumulated by engineers and the research community in materials science, continuum mechanics and applied mathematics to be shared. In this way, the design and analysis of rubber components using the Finite Element Method should be enhanced.
