shaped this book I pay tribute to his contributions to protection and electrical engineering education In the five years since
the first edition appeared many developments have taken place and it is now necessary to update the book The use of digital
communications and advanced signal processing techniques is now widespread and several fully numeric relays are available
from manu facturers Two new Chapters 13 and 14 have been added to introduce readers to these concepts and associated
techniques Artificial intelligence is making its impact in all engineering applications and power system protection is no
exception Expert systems fuzzy logic artificial neural networks adaptive and integrated protection synchronized
measurements using the global positioning system genetic algorithms flexible a c transmission systems are some of the
techniques considered in connection with protection Although many of these techniques have not yet found major application
