## Comprehending...

All biotic and abiotic factors are interrelated. In nature you will find that if one factor is changed or removed, it impacts the availability of other resources within the system. Knowing this, give an example of what might happen given the following situations.

In the open space place either an (A) for abiotic or (B) for biotic to identify the **bolded** object.

1. All of the **rocks** (A) are removed from a desert ecosystem, what would happen to the population of rock dwelling **lizards** (b) and in turn the animals which eat them. The lizards would die off because their resource is gone.
2. A ten mile area of **trees** (B) is removed from the tropical rainforest. How will this affect the amount of **water** (A) and the amount of **oxygen** (A) in the area? It will affect it tremendously and all the animals will lose their resources

## INSTRUCTIONS:

1. Choose an ecosystem to draw. In your drawing include the following:
