Abstract Science Paper Example:

Scientific Papers Made Easy Stuart West, Lindsay Turnbull, 2023-01-30 Writing scientific publications is a fundamental step in the research process. Furthermore, as science becomes more interdisciplinary and the number of journals continues to expand, individual papers increasingly need to stand out to be read and have any form of impact. It is widely assumed that students and early career scientists will simply acquire the necessary expertise. However, this could not be further from the truth; many early career scientists find writing both intimidating and overwhelming. Writing is a skill that needs to be learnt and actively developed. This novel book's fundamental principle is simple: the reader must come first. The purpose of a scientific paper is to pass on knowledge, and so impactful writing must focus on attracting, holding, and illuminating readers. The authors demonstrate how just a few simple pointers can significantly improve both writing quality and impact. They tackle each component of a paper in turn, providing a simple framework that makes clear what needs to be included and what doesn't and in what order. They also provide advice for writing up different types of science, from laboratory experiments to theoretical modelling. The focus throughout is on the need to use simple, jargon-free English and to assume that the reader has little or no prior knowledge. In summary, the book is about writing better scientific papers that are more likely to be read and have impact. *Scientific Papers Made Easy* is targeted at a broad audience of students and professionals across the biological life and human sciences. It uses simple biological and human examples that assume no prior knowledge and will resonate with any scientist.

Vertebrate Palaeontology Michael J. Benton, 2024-07-15 All new edition of the world's leading vertebrate palaeontology textbook, now addressing key evolutionary transitions and ecological drivers for vertebrate evolution. Richly illustrated with colour illustrations of the key species and cladograms of all major vertebrate taxa. *Vertebrate Palaeontology* provides a complete account of the evolution of vertebrates, including macroevolutionary trends and drivers that have shaped their organs and body plans, key transitions such as terrestrialization, endothermy, flight, and impacts of mass extinctions on biodiversity, and ecological drivers behind the origin of chordates and vertebrates, their limbs, jaws, feathers, and hairs. This revised and updated fifth edition features numerous recent examples of breakthrough discoveries in line with the current macroevolutionary approach in palaeontology research, such as the evolutionary drivers that have shaped vertebrate development. Didactical features have been enhanced and include new functional and developmental feature spreads, key questions, and extensive references to useful websites. Written by a leading academic in the field, *Vertebrate Palaeontology* discusses topics such as Palaeozoic fishes, including Cambrian vertebrates, placoderms, armoured monsters, *Pan-Chondrichthyes* such as sharks and rays, and *Osteichthyes* bony fishes. The first tetrapods, covering problems of life on land, diversity of Carboniferous tetrapods and temnospondyls, and reptiliomorphs following the Carboniferous. Mesozoic reptiles such as Testudinata (turtles), Crocodylomorpha, Pterosauria, Dinosauria, great sea dragons, and Lepidosauria (lizards and snakes). Mammals of the southern and northern hemispheres, covering Xenarthra (sloths, anteaters).

Afrotheria African mammals Laurasiatheria bats ungulates carnivores and Euarchontoglires rodents primates A highly comprehensive and completely up to date reference on vertebrate evolution Vertebrate Palaeontology is an ideal learning aid for palaeontology courses in biology and geology departments The text is also highly valuable to enthusiasts who want to experience the flavour of how modern research in the field is conducted [The Lancet](#) ,1885 [Beyond open access: visions for open evaluation of scientific papers by post-publication peer review](#) Nikolaus Kriegeskorte,Diana Deca, A scientific publication system needs to provide two basic services access and evaluation The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of papers by relying on just 2-4 pre publication peer reviews and by keeping the reviews secret As a result the current system suffers from a lack of quality and transparency of the peer review evaluation process and the only immediately available indication of a new paper's quality is the prestige of the journal it appeared in Open access is now widely accepted as desirable and is slowly beginning to become a reality However the second essential element evaluation has received less attention Open evaluation an ongoing post publication process of transparent peer review and rating of papers promises to address the problems of the current system However it is unclear how exactly such a system should be designed The evaluation system steers the attention of the scientific community and thus the very course of science For better or worse the most visible papers determine the direction of each field and guide funding and public policy decisions Evaluation therefore is at the heart of the entire endeavor of science As the number of scientific publications explodes evaluation and selection will only gain importance A grand challenge of our time therefore is to design the future system by which we evaluate papers and decide which ones deserve broad attention So far scientists have left the design of the evaluation process to journals and publishing companies However the steering mechanism of science should be designed by scientists The cognitive computational and brain sciences are best prepared to take on this task which will involve social and psychological considerations software design and modeling of the network of scientific papers and their interrelationships This Research Topic in Frontiers in Computational Neuroscience collects visions for a future system of open evaluation Because critical arguments about the current system abound these papers will focus on constructive ideas and comprehensive designs for open evaluation systems Design decisions include Should the reviews and ratings be entirely transparent or should some aspects be kept secret Should other information such as paper downloads be included in the evaluation How can scientific objectivity be strengthened and political motivations weakened in the future system Should the system include signed and authenticated reviews and ratings Should the evaluation be an ongoing process such that promising papers are more deeply evaluated How can we bring science and statistics to the evaluation process e.g. should rating averages come with error bars How should the evaluative information about each paper e.g. peer ratings be combined to prioritize the literature Should different individuals and organizations be able to define their own evaluation formulae e.g. weighting ratings according to different criteria How can we efficiently transition toward the future system
