**Green Home Building** Miki Cook, Doug Garrett, 2014-09-01 A comprehensive guide to building green on any budget. According to conventional wisdom, building a green home is an expensive endeavor. The standard approach treats green as an add-on, tacking premium products, finishes, and equipment onto a traditional home design. As a result, many green home projects end up over budget or fail to achieve their environmental and performance goals. *Green Home Building* explodes the myth that green homes have to cost more. Using proven methods based on applied building science, the authors show how to lower base construction costs to provide funding for high performance upgrades. Achieve a net zero energy home including zeroing water waste, carbon, and associated costs within fifteen years. Live affordably into the future despite anticipated rising costs for fuel, water, materials, taxes, and health care. This comprehensive guide to building green on any budget defines the strategies that maximize the return on green investments. Written for anyone who has ever been swayed by the argument that the price tag limits how green a home can be, *Green Home Building* is a must read for builders, contractors, architects, designers, and homeowners. Miki Cook is a green building and sustainability consultant who has dedicated her career to

educating contractors and the public on the strategies methods and benefits of green homes Doug Garrett has trained thousands of homebuilders architects and sub contractors to build energy efficient homes using applied building science to improve comfort durability and healthfulness while meeting or exceeding the energy code     **AB 970 Low-rise Residential Alternative Calculation Method Approval Manual** ,2001     2019 Residential Compliance Manual California Energy Commission,2018     *Official Compilation, Rules and Regulations of the State of Georgia* ,1985     *Teaming for Efficiency* ,2002     **Split System Space Cooling Refrigerant Charge and Airflow Measurement** Bruce Wilcox,2001
