

7.2 PhET LAB: Alpha Decay

Name: _____

OBJECTIVE: explain the alpha decay process; complete radioactive decay equations; define and analyze half-life through applying the PhET "Alpha Decay" simulation at <http://phet.colorado.edu>.

Open/Run Alpha Decay at <http://phet.colorado.edu>.

Take 5 minutes to freely explore the sim.

Investigating Alpha Decay

1. Start on the **SINGLE ATOM** tab. Observe the decay of Polonium-211. After each decay, press the RESET NUCLEUS button to watch the process again. Write a description of alpha decay for Po-211.

Complete the following alpha decay equations, using <http://www.chemicalelements.com> as a resource:

7. How is alpha decay used in everyday life? (give at least two uses)

Investigating Half-Life of Alpha Decay

8. Click the **MULTIPLE ATOMS** tab. Execute five trials to determine the number of parent and daughter nuclei at one half-life. Complete the table below.

Parent Nuclei Po-211	Parent Nuclei (remaining nuclei) [yellow]	Daughter Nuclei (decayed nuclei) [black]
100		
80		
60		
40		
20		

9. Define half-life.

Johannes Brussaard, 1958 **Alpha Decay in Isotopes of Atomic Number Less Than 83**, 1949 Some time ago we started work in an attempt to observe alpha particle decay in isotopes of atomic number less than 83 In the first experiments thin targets of gold leaf were bombarded with 190 MeV deuterons in the 184 inch cyclotron Two alpha decay periods were

observed in these targets one of 0.7 minutes half life and another of 4.3 minutes half life The alpha particle energies were 5.7 and 5.2 MeV respectively Chemical separations proved that the 4.3 minute period is due to a gold isotope and suggested that the 0.7 minute period is due to a mercury isotope The mass numbers of these new isotopes have not been determined However the results of excitation functions in the production of the gold isotope by bombarding gold and platinum with protons suggest that its mass number lies in the range 185-188 The work on this isotope indicates that the alpha to electron capture branching ratio is of the order of magnitude of 10⁻⁴ and that positron activity accompanies the 4.3 minute alpha period

On the First Structure in Alpha Decay Age Bohr, P.O. Fröman, Ben R. Mottelson, 1955 Alpha-Decay Paradox, Barrier Penetration Shivam Gress, 2024-11-15

In earlier times the challenge of alpha particle barrier penetration was a notable concern in the domain of classical mechanics The application of quantum mechanics to this problem not only aids in its comprehension but also provides insights into various questions including the variation of alpha energy with half life which is a key aspect of the Geiger Nuttall rule and can be explained through quantum mechanics Alpha decay exemplifies a practical issue that directly relates to the theoretical concepts of potential wells and barriers introduced in the foundational stages of quantum mechanics education A comprehensive grasp of this theory is essential for tackling more intricate problems within the discipline This text provides an in depth exploration of the alpha decay issue emphasizing the limitations of classical methods in examining the relationship between decay energy and half life while also demonstrating how quantum mechanics effectively addresses these challenges Furthermore the book offers a detailed analysis of the energetics involved in alpha decay thereby enhancing students comprehension of the subject A solid understanding of alpha decay energetics lays the groundwork for a more straightforward grasp of beta decay energetics The focus of this book is exclusively on transitions from ground state to ground state for even even nuclei even atomic number and even neutron number Calculations related to odd odd even odd and odd even nuclei are not included as they fall outside the intended scope of this work However future editions may consider incorporating this topic as an additional feature
