From its outset UDMS has highlighted changes and trends in urban data and urban data management. However, the rate of emergence of new data and new technologies has never been as rapid as it is now. Trends including smart cities, smart phones, social media, 3D modelling, volunteered geographic information, building information modelling, and the internet of things all generate information about the urban environment and the people who live there. Additionally, the volume of data generated in part through such techniques has in turn resulted in research into big data: how best to handle the data, analyse it, visualise it in different contexts. Thus, the challenges and opportunities facing those working with these new types of urban data are manifold. Given this, the general theme for UDMS 2013 was Recent and Emerging Trends in the Management of New Urban Data. This book contains 20 papers selected from the long papers that were submitted for UDMS 2013. Each paper was reviewed by three independent academic reviewers from around the world, both for academic quality and for clarity in communication. The book is intended to be suitable for different readers, from city planners and architects to academics, students, and policy makers, and those involved in urban planning. **Teacher of English** Arco Publishing Company, 1957 **How to Qualify for United States Air Force Academy** Arco Publishing Company, 1959 **Biology** Edward C.
