**Strategic Retail Management** Joachim Zentes, Dirk Morschett, Hanna Schramm-Klein, 2016-10-07 This book is devoted to the dynamic development of retailing. The focus is on various strategy concepts adopted by retailing companies and their implementation in practice. This is not a traditional textbook or collection of case studies; it aims to demonstrate the complex and manifold questions of retail management in the form of twenty lessons where each lesson provides a thematic overview of key issues and illustrates them via a comprehensive case study. The examples are all internationally known retail companies to facilitate an understanding of what is involved in strategic retail management and illustrate best practices. In the third edition all chapters were revised and updated. Two new chapters were added to treat topics like corporate social responsibility as well as marketing communication. All case studies were replaced by new ones to reflect the most recent developments. Well known retail companies from different countries like Tesco, Zalando, Hugo Boss, Carrefour, Amazon, Otto Group are now used to illustrate particular aspects of retail management.

*Indoor Air Quality* Dikaia E. Saraga, 2020-12-07 The monitoring of indoor air pollutants in a spatio temporal basis is challenging. A key element is the access to local i.e. indoor residential workplace or public building exposure measurements. Unfortunately the high cost and complexity of most current air pollutant monitors result in a lack of detailed spatial and temporal resolution. As a result individuals in vulnerable groups (children, pregnant, elderly and sick people) have little insight into their personal exposure levels. This becomes significant in cases of hyper local variations and short term pollution events such as instant indoor activity e.g. cooking, smoking and dust resuspension. Advances in sensor miniaturization have encouraged the development of small inexpensive devices capable of estimating pollutant concentrations. This new class of sensors presents new possibilities for indoor exposure monitoring. This Special Issue invites research in the areas of the triptych indoor air pollution monitoring, indoor air modeling and exposure to indoor air pollution. Topics of interest for the Special Issue include but are not limited to the following: low cost sensors for indoor air monitoring, indoor particulate matter and volatile organic compounds, ozone, terpene chemistry, biological agents indoors, source apportionment, exposure assessment, health effects of indoor air pollutants, occupant perception, climate change impacts on indoor air quality.
