The knowledge of mine wastes represents a new interdisciplinary science and this book provides an introductory descriptive and analytic overview of the wastes produced in the mineral industry. It describes the characterization, prediction, monitoring, disposal, and treatment, as well as environmental impacts. Intended for undergraduate courses, it systematically builds the reader's understanding and knowledge of the wastes produced, their physical and chemical characteristics, and how to deal responsibly with them on a short and long term basis. The text employs 16 case studies spanning the world's mineral industry that elucidate best practice and specific challenges in mine waste management and site rehabilitation.
