

# The Stickleback Fish -- A Story of Modern Evolution

This activity uses a stickleback as an example of how natural selection can change a population. The complete stickleback life cycle is complex with an extensive reproductive period that includes the entire year. This experiment is simplified from the actual experiment performed by Dr. John Endler over 20 years between 1970 and 1990.

## Background Information

Use the following questions to review the background information about the stickleback fish.

- What happened to the fish in Lake Superior after industrialization by 1900?

## Stickleback Evolution Lab -- Review Questions

### Introduction

- What happened to the fish in Lake Superior?

- What is the process of natural selection?

- How did natural selection of sticklebacks lead to the standard form?

- What is the evidence about natural selection in stickleback populations? This list of the points applies to both the form of sticklebacks in Lake Superior and the reduced spine form.

- What other evidence supports the stickleback story? Use the following experiment as an example for evidence. Look at Figure 1 for resources.

- Look at Figure 1 on the back of the page for your teacher's permission. Then click on the following link. Describe the features of the stickleback species.

- What is the evidence about sticklebacks that comes in addition to the species, related to another component of the series of a stickleback form?

**Wild Immunology—The Answers Are Out There** Gregory M. Woods, Andrew S. Flies, 2019-03-20 Go into partnership with nature she does more than half the work and asks none of the fee Martin H Fisher Nature has undertaken an immense amount of work throughout evolution The evolutionary process has provided a power of information that can address key questions such as Which immune molecules and pathways are conserved across species Which molecules and pathways are exploited by pathogens to cause disease What methods can be broadly used or readily adapted for wild immunology How does co infection and exposure to a dynamic environment affect immunity Section 1 addresses these questions through an evolutionary approach Laboratory mice have been instrumental in dissecting the nuances of the immune system The first paper investigates the immunology of wild mice and reviews how evolution and ecology sculpt differences in the immune responses of wild mice and laboratory mice A better understanding of wild immunology is required and sets the scene for the subsequent papers Although nature doesn t ask for a fee it is appropriate that nature is repaid in one form or another The translational theme of the second section incorporates papers that translate wild immunology back to nature But any non human non laboratory mouse research environment is hindered by a lack of research tools hence the underlying theme throughout the second section Physiological resource allocation is carefully balanced according to the most important needs of the body Tissue homeostasis can involve trade offs between energy requirements of the host and compensatory mechanisms to respond to infection The third section comprises a collection of papers that employ novel strategies to understand how the immune system is compensated under challenging physiological situations Technology has provided substantial advances in understanding the immune system at cellular and molecular levels The specificity of these tools e g monoclonal antibodies often limits the study to a specific species or strain A consequence of similar genetic sequences or cross reactivity is that the technology can be adapted to wild species Section 4 provides two examples of probing wild immunology by adapting technology developed for laboratory species , [The Handy Biology Answer Book](#) Patricia Barnes-Svarney, Thomas E.
