The diagram illustrates a three-pronged approach to future land use planning. It begins with a central goal, 'Future Land Use Planning', which branches into three main data collection categories: Geological, Topographical, and Geophysical. Each category is supported by specific field and mapping techniques. Geological data is gathered through field surveys, cross-sections, and subsurface logs. Topographical data is collected via 2D and 3D mapping. Geophysical data is obtained through seismic refraction, GPR, and resistivity surveys. All three data streams feed into a comprehensive 'Environment and Subsurface Diagnosis'. This diagnosis then informs the creation of 'Optimal Land Use Planning', which ultimately leads to 'Sustainability'.
