Energy Efficiency Improvements in Electric Motors and Drives Anibal de Almeida, Paolo Bertoldi, Werner Leonhard, 2012-12-06 The reduction of energy consumption through improvements in energy efficiency has become an important goal for all countries in order to improve the efficiency of the economy to increase energy supply security and to reduce the emissions of CO and other pollutants caused by power generation

2 Electric motors use over half of all electricity consumed in developed countries Typically 60 80% of the electricity which is used in the industrial sector and about 35% of the electricity used in the commercial sector in the European Union is consumed by motors In industry a motor consumes an annual quantity of electricity which corresponds to approximately 5 times its purchase price throughout its whole life of around 12 to 20 years Motors are by far the most important type of electric load They are used in all sectors and in a wide range of applications namely the following fans compressors pumps mills winders elevators transports home appliances and office equipment etc It is their wide use that makes motor drive systems one of the main targets to achieve significant energy savings As motors are the largest Users of electrical energy even small efficiency improvements will produce very large energy savings

Electrical Machines & Power Systems (Problems With Solutions) C S Indulkar, 2012 This book contains problems in Electrical Machines Power Systems Problems with Solutions I have used these and other problems in the class room for many years In most of the solutions I have deliberately avoided giving theoretical explanations because an average student should know the theory well before attempting to solve any problem However in each chapter I have provided a brief introduction related to the chapter so that students are made aware of the contents of the chapter before reading the problems and their solutions The introduction related to each chapter contains Objective type Questions and their answers The introductions contain brief notes on the topics of the chapters and also include Indian Standards for testing and maintenance of substation equipments transformer overhead lines underground cables and materials
