**Practical Business Math Procedures** Jeffrey Slater, 2003    **Elementary Statistics** Allan G. Bluman, 2001 New edition of a beginning statistics text for students whose mathematical background is limited to basic algebra. Bluman Community College of Allegheny County uses a nontheoretical approach in which concepts are explained intuitively and are supported by examples. There are no formal proofs and the applications include problems from business, economics, health, medicine, science, engineering, social science, education and topics of general interest. Each of the eight chapters begins with an outline and a list of learning objectives. Contains a removable foldout of important formulas. Annotation copyrighted by Book News Inc Portland OR

**Algebra for College Students** Mark Dugopolski, 2006 Algebra for College Students 4th Edition is designed to provide students with the algebra background needed for further college level mathematics courses. The unifying theme of this text is the development of the skills necessary for solving equations and inequalities followed by the application of those skills to solving applied problems. This text contains 2 chapters: Polynomial, Rational Functions and Counting Probability in addition to those found in Dugopolski's Intermediate Algebra.

**Knowledge Spaces** Jean-Claude Falmagne, Dietrich Albert, Christopher Doble, David Eppstein, Xiangen Hu, 2013-06-20 The book describes up to date applications and relevant theoretical results. These applications come from various places but the most important one numerically speaking is the internet based educational system ALEKS. The ALEKS system is bilingual English/Spanish and covers all of mathematics from third grade to the end of high school and chemistry. It is also widely used in higher education because US students are often poorly prepared when they reach the university level. The chapter by Taagepera and Arasasingham deals with the application of knowledge spaces independent of ALEKS to the teaching of college chemistry. The four chapters by Albert and his collaborators strive to give cognitive interpretations to the combinatoric structures obtained and used by the ALEKS system. The contribution by Eppstein is technical and develops means of searching the knowledge structure efficiently.
