**Algebraic Geometry and Statistical Learning Theory** Sumio Watanabe, 2009      Algebraic Geometry and Statistical Learning Theory Sumio Watanabe, 2009-08-13 Sure to be influential this book lays the foundations for the use of algebraic geometry in statistical learning theory Many widely used statistical models and learning machines applied to information science have a parameter space that is singular mixture models neural networks HMMs Bayesian networks and stochastic context free grammars are major examples Algebraic geometry and singularity theory provide the necessary tools for studying such non smooth models Four main formulas are established 1 the log likelihood function can be given a common standard form using resolution of singularities even applied to more complex models 2 the asymptotic behaviour of the marginal likelihood or the evidence is derived based on zeta function theory 3 new methods are derived to estimate the generalization errors in Bayes and Gibbs estimations from training errors 4 the generalization errors of maximum likelihood and a posteriori methods are clarified by empirical process theory on algebraic varieties      **Statistical learning theory and stochastic optimization** Olivier Catoni, 2004      Information Geometry and Its Applications Shun-ichi

Amari, 2016-02-02 This is the first comprehensive book on information geometry written by the founder of the field It begins with an elementary introduction to dualistic geometry and proceeds to a wide range of applications covering information science engineering and neuroscience It consists of four parts which on the whole can be read independently A manifold with a divergence function is first introduced leading directly to dualistic structure the heart of information geometry This part Part I can be apprehended without any knowledge of differential geometry An intuitive explanation of modern differential geometry then follows in Part II although the book is for the most part understandable without modern differential geometry Information geometry of statistical inference including time series analysis and semiparametric estimation the Neyman Scott problem is demonstrated concisely in Part III Applications addressed in Part IV include hot current topics in machine learning signal processing optimization and neural networks The book is interdisciplinary connecting mathematics information sciences physics and neurosciences inviting readers to a new world of information and geometry This book is highly recommended to graduate students and researchers who seek new mathematical methods and tools useful in their own fields
