**Managing Business Complexity** Michael J. North, Charles M. Macal, 2007-03 Agent based modeling and simulation ABMS a way to simulate a large number of choices by individual actors is one of the most exciting practical developments in business modeling since the invention of relational databases. It represents a new way to understand data and generate information that has never been available before a way for businesses to view the future and to understand and anticipate the likely effects of their decisions on their markets and industries. It thus promises to have far reaching effects on the way that businesses in many areas use computers to support practical decision making. Managing Business Complexity is the first complete business oriented agent based modeling and simulation resource. It has three purposes: first to teach readers how to think about ABMS that is about agents and their interactions; second to teach readers how to explain the features and advantages of ABMS to other people; and third to teach readers how to actually implement ABMS by building agent based simulations. It is intended to be a complete ABMS resource accessible to readers who haven't had any previous experience in building agent based simulations or any other kinds of models for that matter. It is also a collection of ABMS business applications resources all assembled in one place for the first time. In short Managing Business Complexity addresses who needs ABMS and why where and when ABMS can be applied to the everyday business problems that surround us and how specifically to build these powerful agent based models.

**Web Based Energy Information and Control Systems** Barney L. Capehart, Lynne C. Capehart, 2021-01-07 Advances in new equipment new processes and new technology are the driving forces in improvements in energy management energy efficiency and energy cost control. The purpose of this book is to document the operational experience with web based systems in actual facilities and in varied applications and to show how new opportunities have developed for energy and facility managers to quickly and effectively control and manage their operations. You'll find information on what is actually happening at other facilities and see what is involved for current and future installations of internet based technologies. The case studies and applications described should greatly assist energy facility and maintenance managers as well as consultants and control systems development engineers.
