Complete PCB Design Using OrCAD Capture and PCB Editor Kraig Mitzner, 2009-05-28 This book provides instruction on how to use the OrCAD design suite to design and manufacture printed circuit boards. The primary goal is to show the reader how to design a PCB using OrCAD Capture and OrCAD Editor. Capture is used to build the schematic diagram of the circuit and Editor is used to design the circuit board so that it can be manufactured. The book is written for both students and practicing engineers who need in depth instruction on how to use the software and who need background knowledge of the PCB design process. Beginning to end coverage of the printed circuit board design process. Information is presented in the exact order a circuit and PCB are designed. Over 400 full color illustrations including extensive use of screen shots from the software allow readers to learn features of the product in the most realistic manner possible. Straightforward realistic examples present the how and why the designs work providing a comprehensive toolset for understanding the OrCAD software. Introduces and follows IEEE IPC and JEDEC industry standards for PCB design. Unique chapter on Design for Manufacture covers padstack and footprint design and component placement for the design of manufacturable PCBs. FREE CD containing the OrCAD demo version and design files

Microcontroller & FPGA-based Systems Ryan Hoover, 2009 Printed Circuit Board design and implementation is a research topic most any company or group manufacturing electronic devices must address. There are issues in every aspect of design ranging from schematics to pad stacks to routing. An error in any one of these steps propagates through the remaining steps. There are many approaches and software packages for moving a design from schematics to a physical PCB. However software packages can range from being free to costing thousands. This thesis describes the design process from start to finish of a multi purpose FPGA based printed circuit board in two competing software packages. It will detail issues encountered along the way and how these issues were resolved. Commercially available products will be used throughout the process including the Xilinx Spartan 3E FPGA. The differing design processes in the software packages Cadence Allegro Design Entry HDL and Advanced Circuits PCB Artist will be detailed and explored in order to determine which characteristics of each package suites various types of hardware design. The goal of this project is to create a reference manual for students to use as a guide in choosing a software package and working through the PCB design process at the University of Delaware's Electrical and Computer Engineering Department. These two software packages are available to all students in the department to learn and design printed circuit boards
