Jaiswal, Jay Prakash Verma, Tarun Belwal, Arthur Prudêncio De Araujo Pereira, Avinash Bapurao Ade, 2023-07-14 [Impact of novel omic technologies on biological control against plant pathogens](#) Inmaculada Larena, Eduardo Antonio Espeso, Javier

Veloso, 2023-05-02 [Biological Control](#) Peter G. Mason, 2021-10 Biological Control Global Impacts Challenges and Future Directions of Pest Management provides a historical summary of organisms and main strategies used in biological control as well as the key challenges confronting biological control in the 21st century Biological control has been implemented for millennia initially practised by growers moving beneficial species from one local area to another Today biological control has evolved into a formal science that provides ecosystem services to protect the environment and the resources used by humanity With contributions from dedicated scientists and practitioners from around the world this comprehensive book highlights important successes failures and challenges in biological control efforts It advocates that biological control must be viewed as a global endeavour and provides suggestions to move practices forward in a changing world Biological Control is an invaluable resource for conservation specialists pest management practitioners and those who research invasive species as well as students studying pest management science

Innovative Strategies for Enhancing Plant Resilience to Phytopathogenic Microbes Temoor Ahmed, Dirk Janssen, Yasser Nehela, 2025-09-02 Phytopathogenic microbes such as fungi bacteria viruses and nematodes pose significant threats to global food security by compromising plant health and reducing crop yields Traditional methods of disease management often rely on the extensive use of chemical fungicides which can have harmful effects on the environment and human health Consequently there is an urgent need to develop sustainable strategies for enhancing plant resilience to phytopathogenic microbes While most research has focused on plant responses to abiotic stresses understanding of plant resilience to phytopathogenic microbes and host pathogen interactions remains limited Plants respond to these pathogens using multifarious and interlinked adaptive mechanisms Understanding the physiological biochemical and molecular mechanisms underlying plant defense responses and harnessing this knowledge for breeding programs holds great promise for sustainable agriculture

Plant Competition in a Changing World Judy Simon, Susanne Schmidt, 2017-06-22 Competitiveness describes a key ability important for plants to grow and survive abiotic and biotic stresses Under optimal but particularly under non optimal conditions plants compete for resources including nutrients light water space pollinators and other Competition occurs above and belowground In resource poor habitats competition is generally considered to be more pronounced than in resource rich habitats Although competition occurs between different players within an ecosystem such as between plants and soil microorganisms our topic focusses on plant plant interactions and includes inter specific competition between different

species of similar and different life forms and intra specific competition Strategies for securing resources via spatial or temporal separation and different resource needs generally reduce competition Increasingly important is the effect of invasive plants and subsequent decline in biodiversity and ecosystem function Current knowledge and future climate predictions suggest that in some situations competition will be intensified with occurrence of increased abiotic e g water and nutrient limitations and biotic stresses e g mass outbreak of insects but competition might also decrease in situations where plant productivity and survival declines e g habitats with degraded soils Changing interactions climate change and biological invasions place new challenges on ecosystems Understanding processes and mechanisms that underlie the interactions between plants and environmental factors will aid predictions and intervention There is much need to develop strategies to secure ecosystem services via primary productivity and to prevent the continued loss of biodiversity This Research Topic provides an up to date account of knowledge on plant plant interactions with a focus on identifying the mechanisms underpinning competitive ability The Research Topic aims to showcase knowledge that links ecological relevance with physiological processes to better understanding plant and ecosystem function
