Defect-Induced Magnetism in Oxide Semiconductors Parmod Kumar, Jitendra Pal Singh, Vinod Kumar, 2023-05-26 Defect Induced Magnetism in Oxide Semiconductors provides an overview of the latest advances in defect engineering to create new magnetic materials and enable new technological applications. First, the book introduces the mechanisms, behavior, and theory of magnetism in oxide semiconductors and reviews the methods of inducing magnetism in these materials. Then, strategies such as pulsed laser deposition and RF sputtering to grow oxide nanostructured materials with induced magnetism are discussed. This is followed by a review of the most relevant postdeposition methods to induce magnetism in oxide semiconductors, including annealing, ion irradiation, and ion implantation. Examples of defect-induced magnetism in oxide semiconductors are provided along with selected applications. This book is a suitable reference for academic researchers and practitioners and for people engaged in research and development in the disciplines of materials science and engineering. Reviews the magnetic, electrical, dielectric, and optical properties of oxide semiconductors with defect-induced magnetism. Discusses growth and post-deposition strategies to grow oxide nanostructured materials such as oxide thin films with defect-induced magnetism. Provides examples of materials with defect-induced magnetism such as zinc oxide, cerium dioxide, hafnium dioxide, and more.

Advancements in Unsaturated Soil Mechanics Laureano Hoyos, Hany Shehata, 2019-11-01 This book presents the collection of technical papers which includes research on two important topics in geotechnical engineering: the characterization of unsaturated soils. The papers in this collection are representative of local challenges facing geotechnical engineers in the Middle East, but their contributions can also be extended to other regions of the world.

Handbook of Research on Managerial Solutions in Non-Profit Organizations Potocan, Vojko, Ün?an, Mustafa C., Nedelko, Zlatko, 2016-08-23 Non-profit Organizations (NPOs) are the fastest growing organizations in modern society. They exist in a liminal realm between public and private organizations, and because of this, new jurisdictions are created for NPOs. The existence of NPOs is contingent upon their adequacy, and management is a key determining factor as to whether an organization survives. The *Handbook of Research on Managerial Solutions in Non-Profit Organizations* provides relevant theoretical frameworks and the latest empirical research findings related to the successful management of nonprofits. Providing insights into the best practices and valuable comparisons between strategies in different contexts, this book gives invaluable support for nonprofit managers, policy makers, students, and researchers.

Frontiers in Physics - 2019 Editor's Choice Alex Hansen,Thomas Beyer,Ewald Moser,Laura Elisa Marcucci,Ralf Metzler,Christian F. Klingenberg,James Sauls,José W. F. Valle,Jan De Boer,Dumitru Baleanu,Lorenzo Pavesi,Bretislav Friedrich,Christine Charles,Matjaž Perc,Jasper Van Der Gucht,2020-05-19

Frontiers in Physics FPHY is now in its eighth year Up to last year the journal received a slowly increasing trickle of manuscripts and then during the summer Boom The number of manuscripts we receive started increasing exponentially This is of course a signal to us who are associated with the journal that we are on the right track to build a first rate journal spanning the entire field of physics And it is not the only signal We also see it in other indicators such as the number of views and downloads Impact Factor and the Cite Score Should we be surprised at this increase If I were to describe FPHY in one word it would be innovation Attaching the names of the reviewers that have endorsed publication permanently to the published paper is certainly in this class It ensures that the reviewers are accountable furthermore the level of transparency this implies ensures that any conflict of interest is detected at the very beginning of the process The review process itself is innovative After an initial review that proceeds traditionally the reviewers and authors enter a back and forth dialog that irons out any misunderstanding The reviewers retain their anonymity throughout the process The entire review process and any question concerning editorial decisions is fully in the hands of active scientists The Frontiers staff is not allowed to make any such decision They oversee the process and make sure that the manuscript and the process leading to publication or rejection upholds the standard FPHY is of course a gold open access journal This is the only scientific publication model that is compatible with the information revolution A journal s prestige is traditionally associated with how difficult it is to publish there Exclusivity as criterion for desirability is a mechanism we know very well from the consumer market However is this criterion appropriate for scientific publishing It is almost by definition not possible to predict the importance of a new idea otherwise it would not have been new So why should journals make decisions on publishing based on predicting the possible importance of a given work This can only be properly assessed after publication Frontiers has removed importance from the list of criteria for publication That the work is new is another matter the work must be new and scientifically correct It would seem that removing the criterion of importance would be a risky one but it turns out not to be The Specialty Chief Editors who lead the 18 sections that constitute FPHY have made this selection of papers published in FPHY in 2019 We have chosen

the papers that we have found most striking Even though this is far from a random selection they do give a good idea of what PFHY is about Enjoy We certainly did while making this selection Professor Alex Hansen Field Chief Editor Catalysts for Syngas Production Javier Ereña Loizaga,2020-12-10 This Special Issue on Catalysts for Syngas Production included in the Catalysts open access journal shows new research about the development of catalysts and catalytic routes for syngas production and the optimization of the reaction conditions for the process This issue includes ten articles about the different innovative processes for syngas production Synthesis gas or syngas is a mixture of hydrogen and carbon monoxide with different chemical composition and H₂ CO molar ratios depending on the feedstock and production technology used Syngas may be obtained from alternative sources to oil such as natural gas coal biomass organic wastes etc Syngas is a very good intermediate for the production of high value compounds at the industrial scale such as hydrogen methanol liquid fuels and a wide range of chemicals Accordingly efforts should be made on the co feeding of CO₂ with syngas as an alternative for reducing greenhouse gas emissions In addition more syngas will be required in the near future in order to satisfy the demand for synfuels and high value chemicals
